## > **Automation** from Hospital Ward to Clinic Door

> Healthcare providers are squeezed by the Medicare and insurance companies to hold down costs, while consumers and doctors want more services and flexibility. When you consider the liabilities the healthcare providers have to guard against, the necessity for extreme accuracy and efficiency becomes clear. We offer uncompromising security, unmatched performance, centralized support and rapid deployment that you can count on.

We offer a complete line of automated identification and security products that are designed to help healthcare professionals collect, track patient information, reduce medical errors, improve staff productivity and reduce costs. RFID equipment is used to manage data exchanges, ensure integrity and security throughout the healthcare industry.

# > Patient Tracking and Administration

## ▣ Improving Patient Care

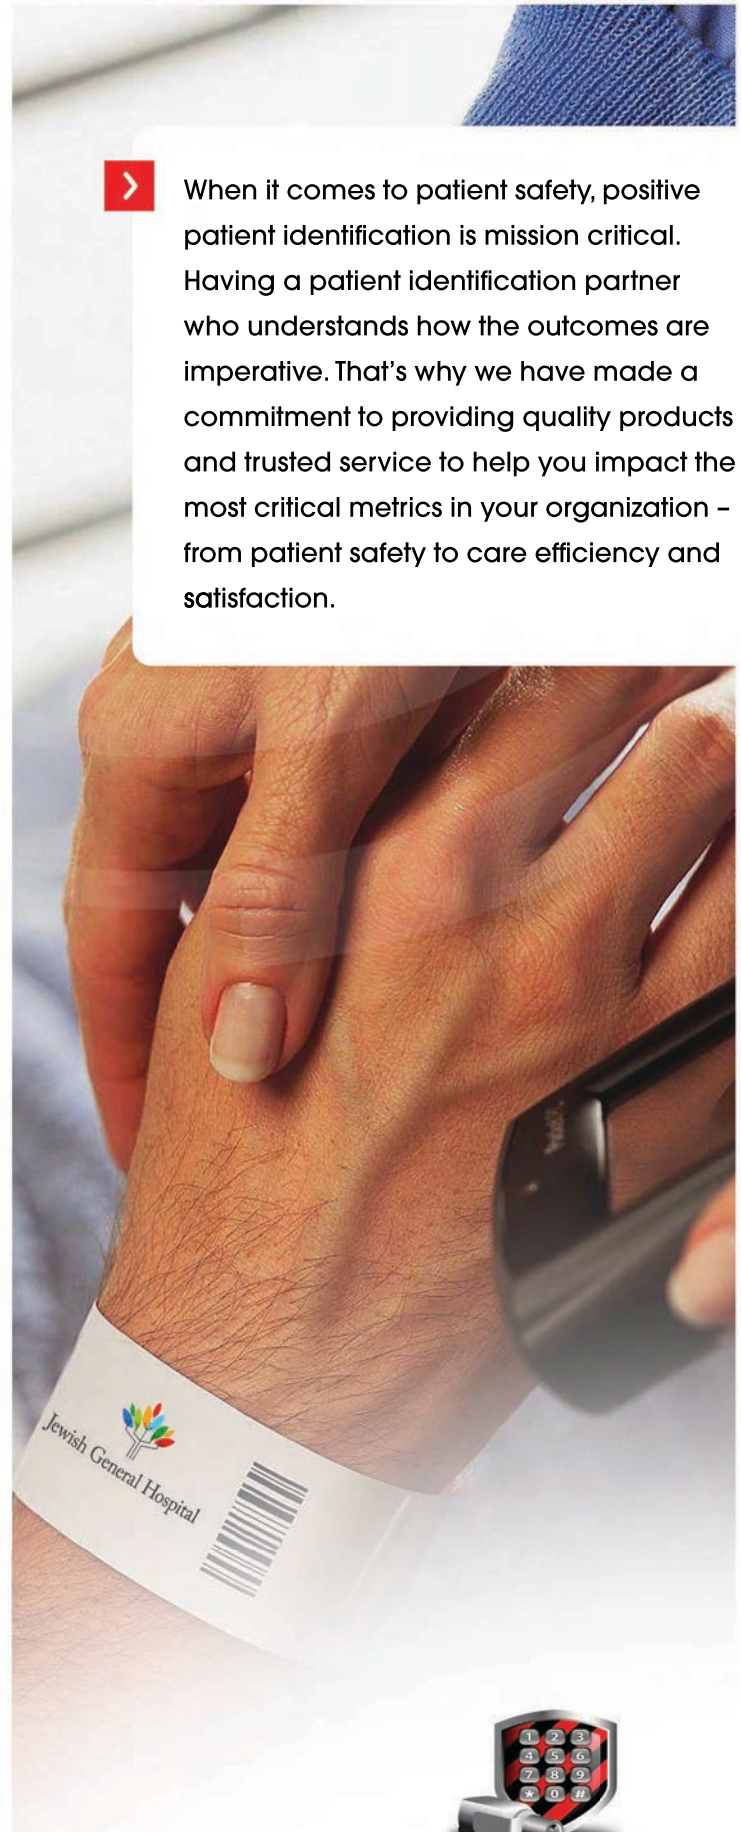

Making sure you have the right patient, medical history, medications and doctor's instructions are critical to providing the right care. The healthcare industry is rapidly adopting bar coded or RFID tagged wrist bands, patient information folders, and medications to be able to accurately and rapidly make the connections to ensure the right information is at hand. Some clinics are even deploying Computerized Physician Order Entry (CPOE) systems for assisted verification. Our solutions offers real-time, accurate, and secure data gathering and information presentation so you know where you stand at all times. Our printers and media enable you to barcode or RFID tag your patients, medications and records so they can be uniquely identified. Our handheld computers ensure that healthcare professionals can capture and use the information they need to on the spot. They even support voice communications so when it is an emergency, you can be contacted without needing an additional device.

Doctor patient privilege is secured with a certified Cisco install which ensures you'll have optimum performance and the latest security from your wireless network. From computers to printers to RFID, use iMotion for rapid deployment, fast problem solving, and remote configuration control.

## Integrated solutions for a range of healthcare delivery

- ▣ Admissions/Discharge
- ▣ Chart Communication EMR
- ▣ Diagnostics
- ▣ Revenue Cycle Management/Finance
- ▣ Lab Services & Testing
- ▣ Medication & Drug Delivery
- ▣ Surgical Procedures
- ▣ Technology
- ▣ Transition

> When it comes to patient safety, positive patient identification is mission critical. Having a patient identification partner who understands how the outcomes are imperative. That's why we have made a commitment to providing quality products and trusted service to help you impact the most critical metrics in your organization - from patient safety to care efficiency and satisfaction.

## > **Security and Records** Confidential information

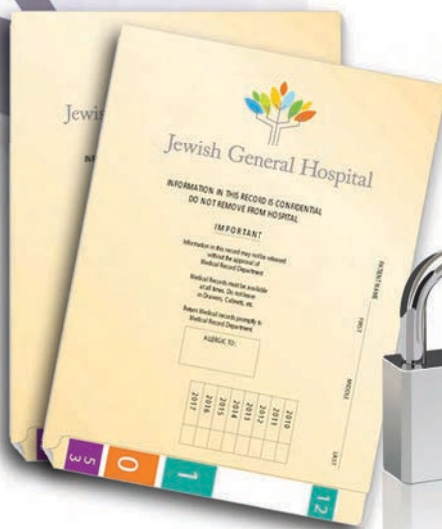

▶ Confidential information is abounding in healthcare, so you need to make sure the information is easy to obtain, yet secure from un-authorized individuals. With the FDA's rules on record keeping and the HIPPA requirements for privacy and protection of electronic health information, you need a reliable, accurate and secure system to help you find and transport information to the right individuals.

The proposed products offer real-time, accurate, and secure data gathering and information so you can rest comfortably. The printers and media enable you to barcode or RFID tag your records so they can be uniquely identified. The handheld or fixed computers ensure that you can identify and retrieve the necessary information.

The privacy and protection is secured with a certified Cisco install (including VoWiFi and RTLS) which ensures you'll have optimum performance and the latest security from your network. From computers to printers to RFID, use iMotion for rapid deployment, fast problem solving, and remote configuration control.

The products we offer cover a wide range of Security and Records applications, including:

- ▶ **Check-in/Check-out**
- ▶ **Searching**
- ▶ **Security**
- ▶ **Retrieval**

# > Asset Tracking

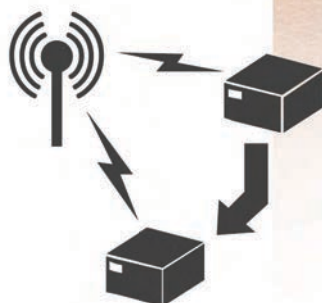

## Maximizing asset utilization

▣ To maximize asset utilization from IV pumps to portable emergency equipment, hospitals and clinics need to be able to find and rapidly deploy these assets to maintain top quality care. Additionally, most of these assets require re-calibration and maintenance from time to time. From virtually indestructible label stock to rugged RFID tags, iMotion offer products not only for tracking but also for permanent automatic identification. Our printers equipped with custom media and rigid RFID tags can make asset marking a breeze and will last the life of the asset. Computers, scanners and RFID readers then enable accurate, high speed tracking and provide the information necessary to ensure that the asset has a current maintenance status, storage location, or last location used. This is especially critical when this equipment can be deployed over your entire campus. They even support voice communications so when it is an emergency, you can be contacted without needing an additional device.

RFID solutions can resolve these issues. The RFID solution may be as simple as simple as attaching an RFID tag to each piece of equipment and strategically locating readers throughout the area of operations where the hardware is used. In this way, any device or patient can be located anywhere in the facility. The result: less time wasted, better utilization of existing assets and improved patient care.

Our solutions cover a wide range of Asset Tracking applications, including:

- ▣ **Asset tagging/labeling**
- ▣ **Check-in/out**
- ▣ **Transfer**
- ▣ **Delivery**
- ▣ **Maintenance**
- ▣ **Calibration**

> Hospitals and the medical care industry in general are adopting asset tracking technology to track equipment and to ensure patient's receive the correct medicines and care - all in an effort to reduce expenses and save patient's lives. RFID technology is key in increasing these efficiencies.

## > **Laboratory**

### Patient relationship is essential

Specimens are often the key to diagnosis, so ensuring that you have the right specimen to patient relationship is essential. Eliminating manual entry is also important for accuracy. Our products offer high speed, accurate, and secure data gathering so you can fully track and trace samples. Our printers and media enable you to barcode or RFID tag your locations and samples so you can uniquely identify where they are stored or if they are in process, even if you need custom solutions for high temp and low temp storage. Our handheld computers ensure you collect the right data and have the right information when you need it and where you need it. Our products are also sealed against contamination and have designated sterilization products to clean them.

If security and loss are a concern, look no further than our RFID solutions. Portal readers, personnel ID cards and RFID tags (label or rigid) can be deployed to secure access and identify samples that are removed from those secure lab areas. If you are having trouble finding that unique item, set the handheld RFID reader to search and you'll find it just by walking around.

Our solutions cover a wide range of Laboratory applications, including:

- ▣ **Receiving**
- ▣ **Repackaging/Re-labeling**
- ▣ **Specimen Tracking**
- ▣ **Test in Progress**
- ▣ **Testing Orders**
- ▣ **Results Recording**

# > Pharmacy

## ▣ Extreme accuracy

Medications are changing rapidly, and treatment innovations include cocktails of drugs, so custom mixing has become a large portion of the job and necessitates an extreme degree of accuracy and tracking. Intermec products offer high speed, accurate, and secure data gathering so you know where you stand at all times. Track your dispensing, your work-in-progress, proper handling and delivery with our products. Our printers and media enable you to bar code or RFID tag your locations and medications so you can uniquely identify your stock and where it is stored, even if you need custom solutions for high temp and low temp storage. Our handheld computers ensure you collect the right data and have the right information when you need it and where you need it. They even support voice communications so when it is an emergency, you can be contacted without needing an additional device.

Our solutions cover a wide range of Pharmacy application necessary to handle supplies, including:

- ▣ Receiving
- ▣ Repackaging/Re-labeling
- ▣ Put away/Picking
- ▣ Prescription fulfillment and tracking
- ▣ Work in progress
- ▣ Transfers and Pickups
- ▣ Ordering/replenishment
- ▣ Medical Dispensary Carts

> Our solutions offer high speed, accurate, and secure data gathering so you know where you stand at all times. Track your dispensing, your work-in-progress, proper handling and delivery with our products.
