

Are you still using the old DVAC line system for your alarm monitoring ?

Not long ago, home security customers had only one option when it came to transmitting their alarm's signal more securely: a supervised land-based telephone line called DVAC (Digital Voice Access Control Systems). This monitoring service involved a leased line from Bell and was dedicated to security systems. It offered a supervised line - with limited protection - meaning that if it happened to be cut, an alarm would occur, but your system would be down for at least 4 hours, before it could be repaired. Because of the leased line costs from Bell, the monthly charge for this obsolete service is much higher than with the new Cellular link technology. And also, the price of a DVAC line is increasing every year...so BE WISE, make the switch today !

MIGRATE TO CELLULAR LINK NEWEST / LATEST TECHNOLOGY

This technology protects against phone line failure. Whether the line is cut or inoperable this system uses an existing cellular network to send the alarm signal. Offering reliable GSM communications over a cellular network, our products connect easily with almost all alarm panels and protect any commercial and residential customers using an advanced wireless technology.

It CAN'T be cut !

NEW Security technology

- Full Alarm/Event Reporting
- Back-up or Primary Communications
- Perfect for Residential and Commercial Alarm Systems
- Real-time signal delivery in Contact ID and SIA formats
- Maximum GSM network coverage in North America
- Fast installation with automated activation

To whom it may concern,

Because of the ever increasing costs of the DVAC line from the telephone suppliers, rather than charging the increase, iMotion decided to offer all of it's customers an upgrade to the NEW Cellular link technology. The new solutions is cheaper, safer and more efficient.

The Cellular Link technology protects against phone line failure. Whether the line is cut or inoperable this system uses a cellular network to send the alarm signals. Offering reliable GSM communications over a cellular network, our products connect easily with almost all alarm panels and protect your commercial establishment using advanced wireless technology. Please note of the following options - and let us know your choice.

COMMERCIAL

OPTION 1

Pay once, the amount of 600\$ for the purchase of the Uplink Cellular module and installation.
Your Alarm monitoring fees will be reduced to 320\$/year.

I choose this option: Your name: _____ Telephone: _____

Signature: _____

OPTION 2

Uplink Cellular module and installation are provided by iMotion Security - Free of charge with a 3-year minimum contract. No extra charge will be applied. Your Alarm monitoring fees will be reduced to 569\$/year.

I choose this option: Your name: _____ Telephone: _____

Signature: _____

Please Fax the completed form to 514 335-5408
