

Milestone Systems XProtect® Corporate

In large-scale installations, XProtect Corporate provides exceptional surveillance overview and control.

Premium software with no limits

XProtect® Corporate is powerful, IP video management software (VMS) designed for large-scale, multi-site installations. XProtect Corporate supports an unlimited number of cameras, users and sites. For systems demanding complete situational awareness and immediate response time, XProtect Corporate offers easy-to-use clients that integrate with interactive multi-layered maps and alarms. Built-in support for XProtect Smart Wall, Milestone's video wall functionality with flexible configuration and independent choice in hardware, enables seamless command center control.

When there's no room for error

XProtect Corporate provides the ultimate peace of mind for high risk, large-scale security installations. Edge storage support combined with XProtect Corporate's failover recording servers and redundant management server ensure video recordings are never interrupted and access to the system is always maintained.

The Milestone open platform is your foundation for success

Milestone is the world's leading provider of open platform IP video surveillance software. XProtect is designed with open architecture that allows for integration with the widest choice of network video and computer hardware. The XProtect products interface with more than 1,000 IP cameras, encoders and select DVRs from over 80 different manufacturers. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support ONVIF and PSIA standards.

The open platform lets you optimize your security installation with today's and tomorrow's best-of-breed solutions since hardware is decoupled from software. By integrating IP video with multiple security systems and video analytics, you gain true value-adding efficiency and expand your capabilities.

- **Limitless:** Milestone Federated Architecture™ and centralized management enables easy and efficient administration of multi-site installations.
- **Future-proof:** Grow your installation according to your needs with the freedom to choose optimal hardware.
- **Cost-effective:** Significantly reduce the cost of video archiving with multi-stage storage.

The Open Platform Company

Complexity made simple

Milestone's top-of-the-line product, XProtect Corporate is the powerful IP surveillance solution preferred for large, multi-site, high-risk security installations.

XProtect Corporate is straightforward to operate letting you focus on security and not be overwhelmed by technology. XProtect Corporate's innovative central administration, intuitive wizards, flexible rules system, automatic network scanning and camera model detection allow you to efficiently manage complex installations, especially with several locations.

In XProtect Corporate, all daily operations are executed through the Milestone XProtect Smart Client, an easy-to-use client application. Continually setting the standard in IP video management, the XProtect Smart Client provides instant access to live cameras or recorded video. XProtect Smart Client features:

- The Sequence Explorer: an instant overview of recorded video and bookmarked incidents, which speeds up your investigation work and simplifies evidence export
- Independent playback: allows you to playback events on one camera while still monitoring live video
- Overlay buttons: enable control of cameras and devices directly from the camera view
- Multiple language support: the XProtect Smart Client is available in 23 different languages

XProtect Corporate also features comprehensive user rights settings and allows administrators to enable or disable certain settings according to specific staff categories or user skill levels. User access rights can also be based on time profiles, enabling time-conditioned access to cameras, the ability to playback specific cameras, control PTZ (Pan-Tilt-Zoom) cameras or export evidence material.

Meeting the needs of customers across the globe, XProtect Corporate's Management Client is available in 11 languages and upholds viewing regulations with privacy masking. Privacy masking is a feature used to protect privacy by concealing parts of an image from being viewed. Once activated, the privacy mask is consistently applied to live, playback and exported video, protecting the privacy of the sensitive image.

XProtect Smart Wall provides powerful surveillance overview

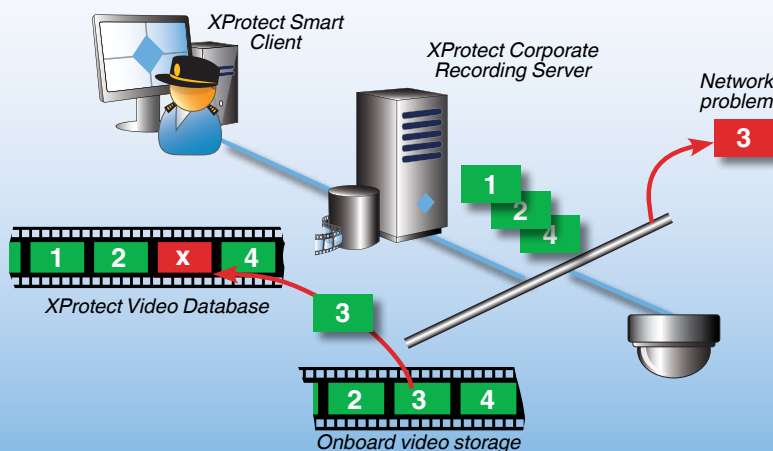

Milestone's Smart Wall for XProtect Corporate is an advanced video wall product that provides supreme situational awareness for large surveillance installations, and integrates seamlessly with the XProtect Smart Client and map functions.

The Smart Wall is an add-on product that allows you to easily populate layouts by dragging and dropping cameras into the monitor views. There is no limit to the number of screens for each Smart Wall, and one or several view presets can be defined to control the layout (grid) and actual content/camera(s).

The XProtect Smart Wall offers a uniquely efficient working environment and can greatly improve the response time in large installations since you can focus on critical areas. Additionally, the Smart Wall is a cost-effective solution because it is hardware independent; freeing you to choose the right solution for your installation.

Edge Storage

Ensuring the continuous availability of recorded audio and video in the event of network or server failure

XProtect Corporate features Edge Storage, an industry-first, safeguard feature that allows cameras to function as failover devices in the event of network or server failure. Edge Storage is a valuable feature for installations demanding continuous availability of critical audio and video, and for installations with unstable network connections. This innovative technology stores audio and video recordings directly on cameras, and enables recordings to be retrieved and viewed in XProtect's video management software once the connection is restored.

Powerful new features: Bookmarking, Multi-Stage Storage and Alarm Manager

Bookmarking

Bookmarking lets you flag video sequences of particular interest and add descriptive notes.

Bookmarking is an ideal tool for users to share information about incidents, especially those on different shifts. Bookmarks can be generated both manually and automatically based on rules. For example, the system could generate a bookmark every time a door is opened during certain hours.

Multi-Stage Storage

XProtect Corporate's multi-stage storage allows setting multiple archive steps with individual retention times and frame rates. The ability to reduce frame rates, or groom video data at each storage stage helps significantly reduce the cost of long-term video storage.

The system dashboard gives an at-a-glance overview of available storage and allows you to optimize the storage usage even for individual cameras.

Alarm Manager

The new Alarm Manager consolidates alarms from all security devices and systems connected to XProtect Corporate. Tight integration with XProtect Corporate's map function enables you to quickly detect and locate alarms, and the alarm list provides a consolidated and clear overview of active alarms and their severity.

Instant access to cameras enables immediate visual verification of alarms, minimizing the number of false alarms.

Federating access to multiple VMS systems

Milestone Federated Architecture™ is a solution that allows multiple, independent sites using XProtect Corporate to be interconnected.

Milestone federated architecture enables you to scale your system endlessly, and also gives you ultimate overview of your entire installation by combining centralized and local site administration into one efficient, easy-to-manage system.

Each site in the federated architecture can operate as an independent system or the sites can be managed as one centralized system, and cameras throughout the system can all be seamlessly accessed.

A typical federated architecture scenario would be a retail chain deployment where the individual stores are handled as independent sites, but still with some degree of primary, centralized management. This makes even very large surveillance installations easy to manage.

The Open Platform: a foundation for long-term success

Milestone XProtect acts as the powerful core of surveillance systems, providing the widest choice in third-party hardware components and integration with other business systems. It is the foundation enabling you to cost-effectively choose the best solutions for today and tomorrow.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-of-breed solutions to 'video enable' organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
