

IP Security Integrator
CANNABIS
INDUSTRY

TOTAL & INTEGRATED Security Systems

When safety, security and compliance are paramount, industries all over the world require a security system that's both reliable and comprehensive. Whether you're a licensed producer, manufacturer or an ancillary business like packaging or extraction, having a scalable, integrated technology that's tailored to your business can create operational efficiencies and drive down business costs.

At the heart of any integrated security solution is software that provides the ability to view and manage perimeter security, access control, intruder alarms, video integrations and much more. For licensed growers that means not only the ability to manage the physical security of the building but other considerations including humidity, temperature and ventilation as well.

Having a simple, flexible and scalable platform that delivers intuitive, innovative protection is one thing, but seamless integration with other systems makes for simplified operations at your facility is another thing altogether.

COMPLETE & UNIFIED technologies

Our strategic alliance with partners allows us to offer you the best transport solutions for your point-of-sale deliveries, armored cars and guards will also be at your disposal for maximum security.

At iMotion we not only ensure to meet the minimum regulations set out by Health Canada, we exceed their requirements to give you total control and insight to your Cannabis Facility. This empowers your team to be proactive in detecting, verifying and diminishing security threats even before the perpetrator has entered your facility. You are in an industry where the slightest mistake can cause the loss of your production license. A theft or a production stop can cost you several thousand dollars. We are fully aware of it and you should too. As a Quebec integrator, we have the authority to practice in all provinces of Canada, including Quebec, which has very specific measures. As a result, we can ensure the safety of your products and capital at a national level.

Not just a reseller; not just an integrator; we are a partner, working in collaboration with you to automate, secure and manage your Cannabis Facility. In iMotion we are confident that: « Only the best secured sites will grow! »

ONLY THE BEST

Secured Sites will Grow!

Since 1999, iMotion has established itself as one of Canada's leading full-service security providers; when cannabis became legal in October 2018, it was only natural for our company to assist growers, distributors and retailers in their security needs. iMotion has set the standard for superior service and quality personnel, in accordance with Health Canada regulations, laws and best practices.

Due to the nature of grow sites, they are among the most targeted locations for crime. An entire crop and the loss of extremely valuable finished products can potentially be wiped by a single theft, not to mention the damage that can occur to other important mechanisms, such as irrigation and lighting systems. Producing and/or storing Cannabis poses a risk to the companies growing it, and to employees in these sites as well. Hence, considering a robust and redundant design of security solutions is crucial in the early site stages, this is only achieved through partnering with a team of experts.

What we offer you is an all-inclusive security service, from the design of your system to the transport of your goods in stores. With our dedicated Project Managers and a team of Engineers, iMotion is with you every step of the way to guide not only the growth of your business, but the growth of your harvest as well.

Frederic
Abenaim
CEO & Founder

“ We are in an interesting period time now, where the world is getting more complex and requires some creative solutions. ”

What sets iMotion apart from anyone else in the marketplace is the fact that we are very exceptional in how we think about risk and manage risk - those two things really differentiate iMotion from many other providers.

The pillars that are at the heart of iMotion, are trust, innovation, excellence and passion. Trust, for example, is very important to us, when you look forward to a data economy and what it means to serve your clients. We're in the data economy and trust is a new currency.

Technology for iMotion is connecting for common good. A very simple statement, but a really important statement to us. It is a form of collaborating and bringing together solutions that are going to serve the industry and our clients. iMotion has taken a strategic and deliberate choice in being a change accelerator. It allows us to take our future forward. Accelerating change for us means that we will help you through that change, through our products and services - one where you don't have to worry about the solution. As you collaborate with us, we will do the engineering, we will do the design and we will lead you into the future.

COMPLIANCE & Licensing Application

At iMotion, we can help and guide you with your Cannabis License Application. Knowing what licenses are needed to start a dispensary can be a complex and difficult process, but obtaining the required licenses are definitely worth it in the long-run.

They will give your dispensary the opportunity to grow with the booming cannabis industry and last in the long-term. Our team will use their knowledge and experience to offer the best strategy, thus ensuring that your application gets the best chance of being approved.

Video Site Evidence Package

The submission of a strong Video Site Evidence package is an important and critical component for a successful Federal Cannabis Application. It basically demonstrates to Health Canada, total compliance, and that your site is well-prepared and ready for operations.

iMotion has a team of professionals who can guide you with this process. From the drone operators, narrators and video editors that will film your fully-functional site - our team of specialists will demonstrate the key aspects of your facility's Good Production Practices (GPP) and Security features. Remember that the Video Site Evidence Package submission must be received by Health Canada before your application can even be considered - and this, within 10 business days following the submission of your "paper" application.

ADVANCED

Perimeter Security Solutions

We offer a range of advanced perimeter security solutions founded on two core principles: deterrence and detection. Configured and controlled using Gallagher Command Centre, our effective and reliable solutions can be managed and monitored across multiple sites from one central location.

Our cost-effective monitored pulse fence system consists of a grid of energized, high tensile wires that can be constructed inside a new or existing perimeter fence. The monitored wires detect unauthorized entry or exit into defined areas and trigger instant alerts.

INTEGRATOR

of advanced IP Solutions

Best possible Results Most value for your money

iMotion Security's relentless commitment to impeccable service resulted in a substantial increase in shares of a highly competitive market. Focused on maintaining the highest level of proficiency, our advisors and technicians constantly attend different manufacturer presentations in order to offer our customers cutting edge digital security technology.

Our expertise, our savvy advice in security matters and our ability to understand our customer's needs mean that we can always offer the best possible results and the most value for your money.

FROM ANALYSIS

to Full Deployment

Expertise & Know-How

iMotion occupies a unique position in Canada, as an integrator of comprehensive IP solutions.

iMotion favors standardized systems of its partner network, ensuring the durability, interoperability and scalability of all solutions implemented. Using a methodology of implementation focused on the optimization of results and costs, iMotion enables its customers to move beyond the pilot and deploy full operational security solutions.

IMPLEMENTATION

Easy & Efficient

Able to combine all technologies using Internet protocols, iMotion guides its clients in the implementation of solutions; From analysis to consulting to full deployment of the solution. Whether a IP video surveillance, an access control system, radio frequency identification (RFID) or all of these technologies combined on a single converged IP network; iMotion is the total integration systems' specialist. On each project, we set up a dedicated team to drive the development and implementation of your IP solutions:

Feasibility study

Definition of the needs, its solution, and recommendation for hardware solutions tailored to the operational constraints of each client.

Software Integration

development of a software solution, integrating the aexisting information system. Our systems integrated IP video can be used for a multitude of applications simultaneously, for example, access control, radio frequency identification (RFID), building management systems, point of sale machines, automatic withdrawals, etc.

Evolutivity and flexibility

Your solutions can be extended by adding a simple and rapid new cameras, whether they are on the same site or a new remote site. Choose exactly what you need today and upgrade your system when your needs change.

R&D RIGHTS

The company sells R & D rights to a foreign group and focuses on representing the best upcoming technologies in the industry.

RETAIL STORES AND LIBRARIES

iMotion starts its RFID activities for stores and libraries, becoming the official NEDAP nationwide partner. iMotion wins big national accounts such as H & M, Desigual and YM Inc.

MANAGEMENT

of large scale projects

For the Cannabis Industry

The iMotion Project Management Team structure will be tailored to provide an effective organisation capable of managing all aspects of this project and to deliver a concise design. The Project Manager and his/her team will work throughout the project to ensure the design programme objectives are planned and managed within a defined operating framework that brings together all the activities and disciplines involved, thus ensuring all relevant parties are fully aware of project progress.

The Project Team will be headed-up by a qualified and trained Project Manager who has full responsibility to the iMotion Board and the Client for the implementation of the program. All other project personnel will be selected for their proven ability to carry out their selected roles and their practical experience in undertaking similar roles.

DESIGN

Process

Value Engineering

Our design team utilizes its understanding of the design process, contract forms, construction procedure, procurement routes and industrial capabilities, to assist design teams in managing the design process through all phases of a project's life. Our design teams implement management systems reflecting the preferred working method of their clients, protecting their interests while acting as a link with members of the client's project team and the contractor. With this in mind, we are constantly looking for "Value Engineering" to offer our clients, reducing your costs, without reducing the specification or operating requirements. We understand that there has been a need to accurately communicate client and designer intentions to those carrying out the installation.

We also recognize the need to prepare appropriate specifications reflecting the contractual conditions. We ensure that the project specifications produced are tailored to internationally recognized formats that comply with all relevant national standards. Furthermore, we believe that the project design teams produce specifications that are geared to today's modern systems requirements which reflect the aspiration and intent of our client.

PARTNERSHIPS

With Leading Manufacturers

Building long lasting relationships

Our relationships with our manufacturing partners are essential to our commitment to quality. We seek out the best companies in the world, who creates well designed, well-made products that are reliable and reasonably priced. We develop long-standing relationships with our partners, so our customers in turn can be confident of their long-standing relationships with iMotion. For over 20 years we have worked with the best partners of the industry producing exceptional security products and accessories.

While the Business regularly evaluates new products offerings, iMotion Security believes the products that is currently offers through our vendors are sufficient to execute and fulfill any foreseeable video surveillance projects.

All of these vendors are considered to be industry leaders in their respective categories.

Founded in 1998, Milestone Systems is a world-leading provider of open platform IP video management software (VMS) with headquarters in Copenhagen, Denmark. Our objective is to improve our clients' organizational processes and increase overall security through the management and distribution of digital video data. Milestone XProtect® VMS is powerful, reliable, easy to use and proven in more than 100,000 installations worldwide. Based on a true open platform, XProtect VMS enables integration with the industry's widest choice in cameras and best-in-class business solutions, such as access control and video analytics.

Milestone's product portfolio also includes Milestone Arcus™, a video surveillance platform designed to be embedded in hardware devices; and the ready-to-use Milestone Husky NVR series, which combines hardware with Milestone's market-leading surveillance software. XProtect VMS is compatible with more than 3,000 encoders, IP cameras and digital video recorders (DVR) from almost 150 different suppliers worldwide.

You can rely on Honeywell for the latest innovations to help you keep up with the IP video market. Because we're your one-stop shop for sales, support and service, you can rest assured that an IP solution backed by Honeywell will be easier to install and maintain. We make sure the products you choose will work the first time – and work together. Trust us to be the only source you need for everything IP

IP is the technology of the future with tremendous potential for growth and cost savings. Honeywell offers a complete IP solution – from their flagship video management platform and robust portfolio of recording solutions, to their IP camera family, which includes a full range of high definition cameras. And the Open Technology Alliance forges strategic relationships with thirdparty vendors to give you ultimate flexibility when designing IP security systems – so you can capitalize on Honeywell's open IP architecture and use the third-party equipment you already have in place to hold down costs and transition to IP with confidence and ease.

Axis is the market leader in network video and a driving force behind the shift from analog to digital video surveillance, which paves the way for a more secure, smarter and safer world. Axis offers network video solutions for professional installations featuring products and solutions that are based on innovative and open technical platforms.

Axis network video products are installed in public places and areas such as retail chains, airports, trains, motorways, universities, prisons, casinos and banks. Axis is a Swedish-based company, which acts globally via its own offices, representatives and well-developed collaboration with partners. Axis retained its position as clear market leader in network cameras and in the category surveillance cameras. Axis also achieved a market leader position in the category video encoder and thereby strengthens the company's position on the surveillance camera market. Axis was the first company in the world to launch a network camera in 1996, initiating the shift from analog to digital technology.

Gallagher Security is a division of Gallagher Group, a global leader in the innovation, manufacture and marketing of security, animal management, fuel systems and contract manufacturing solutions. Established in 1938, Gallagher Group is a privately owned New Zealand company that employs more than 1100 staff and exports to over 160 countries.

Whether you have one or multiple buildings to protect - regardless of the number of users, iMotion Security provides flexible access solutions tailored to every customer's different requirements: multi-site, multi-company, multi-station... Access control means checking that a person has the necessary clearance to enter an area, building or room. It helps organise human traffic inside a site and selectively manage access to different zones. In this way, sensitive areas can be restricted to identified users subject to predefined times, with all movements recorded in a log. Our technical expertise means we can analyse the badges you use today and recommend the solution best suited to your requirements.

IONODES designs, develops and manufactures high quality IP-based video and data processing appliances optimized for use with many other well-known video, data and security management solutions such as Milestone XProtect®.

IONODES' product line includes a wide array of smart appliances, ranging from a complete line of H.264 video encoders & decoders, to more advanced compact server solutions for commercial, industrial and mobile applications.

IONODES line of Hybrid Cloud NVR combined with the IONODES Video Cloud offer an easy way for you to deploy an on-premise Milestone XProtect video solution combined with innovative cloud-based functions. Gain important benefits such as simple and secure live video access and archiving of event-based video clips to cloud-based secure storage.

Established in 2005, Inaxsys is a unified security solutions builder capable of supporting any organization's security requirements - from access control to intelligent video management software to IP and HDCVI cameras and much more.

In a highly fragmented industry, we have grown to become more than just a manufacturer. Time being our clients' more precious asset, we've adapted our methods and business structure to provide them with the best and simplest experience to ensure the protection of people, information and assets. Inaxsys has been consistently growing for the past 15 years. In an industry dominated by a few global players, we've succeeded to achieve recognition by making our customers our number one priority.

Technology changes and evolves. We believe that developing and manufacturing the latest technologies is vital to just stay in business. It's a no-brainer. What really sets us apart is the expertise of our team and their dedication to go beyond what's expected.

ICT

Traditionally, access control systems and intruder detection systems have worked independently of each other. Our products work together to provide a single cohesive and unified solution that helps you keep unwanted visitors outside, while enabling you to monitor and control access inside. All without having to break a sweat.

At ICT, they believe the key to great software is doing all the hard thinking up-front so you don't have to. There's no better example of this theory in action than the ProtegeGX package. It's an enterprise level integrated access control, intrusion detection, and building automation solution with a feature set that is easy to operate, simple to integrate, and effortless to extend.

2N

2N is a leading European company operating worldwide, specializing in the development and manufacturing of communication solutions. It is a world leader in the field of IP intercom systems. All products comply with the strictest international standards (ISO, TUV, UL, CE) and are compatible with many third-party systems.

Whether IP door communicators for door communication and emergency calls, IP audio systems or M2M systems, 2N products reflect the latest trends in security. Their range of best-in-class products and solutions are designed to make life easier, more enjoyable and safer. In 2016, 2N became part of the AXIS Group.

HIKVISION

Hikvision is a world leading IoT solution provider with video as its core competency. Hikvision now has more than 40,000 employees, over 19,000 of which are R&D engineers. Centered at its Hangzhou headquarters, the R&D teams operate globally, including R&D centers in Montreal, Canada and London, the UK, as well as eight cities in China.

Hikvision advances the core technologies of audio and video encoding, video image processing, and related data storage, as well as forward-looking technologies such as artificial intelligence, cloud computing and big data. Over the past several years, Hikvision deepened its knowledge and experience in meeting customer needs in various vertical markets, including public security, transportation, retail, education, healthcare, financial institutions, intelligent buildings and others.

Intelligent Management Systems for Keys & Equipment. Traka systems enable you to secure, manage and audit the use of almost any physical asset, including keys, electronic devices, secure areas, equipment, machinery and vehicles. Traka provides intelligent key and equipment management to better protect your important assets – resulting in improved efficiency, reduced downtime, less damage and fewer losses, which in turn means less administration and lower operating costs.

Traka solutions work for any industry! Beyond simply controlling access to physical keys and assets, Traka solutions can bridge the gap in existing security strategies and empower any organization to improve the processes that affect its bottom line. An integrated Traka solution can help your business increase operational efficiency, maximize utilization and strictly enforce security and safety protocols – all from the systems you currently use.

Medeco® is well known for its innovation and use of technology. Medeco's high security solution starts with key control, a process that ensures keys cannot be duplicated without proper permission. With Medeco's patented key control system, it's virtually impossible for someone – even a locksmith – to duplicate a key without proper permission.

In addition, Medeco's high security locks are strong and built to resist physical attacks such as prying, kicking and sawing. Medeco then takes it further with a uniquely designed tumbler pin system that reduces covert compromise such as picking and bumping.

Medeco adds another layer of security with its line of Intelligent Keys, making it easy and convenient to audit and schedule key usage. Installation is a snap. Medeco's Intelligent Keys simply retrofit existing technology without the usual hard wiring requirements.

Aperio® is a new technology developed to complement existing electronic access control systems, providing end-users with a simple, intelligent way to upgrade the controllability and security level of their premises.

The heart of Aperio is a short-distance, wireless communication protocol, designed to link an online electronic access system with an Aperio enabled mechanical lock. Any number of existing doors can be equipped with Aperio, and at a much lower cost than installing the regular electronic access system on every door. Aperio is easily integrated with most units and systems, regardless of the manufacturer, since it has been developed around an open standard.

Expanding your system by adding Aperio technology on additional doors increases the total security level of the premises. It is easy to install and enhances both the management and surveillance of the complete system.

BriefCam

BriefCam® is the industry's leading provider of the VIDEO SYNOPSIS® technology for rapid video review and search, real-time alerting and quantitative video insights. By transforming raw video into actionable intelligence, BriefCam dramatically shortens the time-to-target for security threats while increasing safety and optimizing operations.

BriefCam products utilize the latest deep learning technology to improve security, safety and efficiency, and are deployed by top law enforcement agencies, governments and Fortune 500 companies across the globe. BriefCam's unmatched detection and extraction accuracy dramatically improves post-event investigation productivity by pinpointing people and objects of interest with speed and precision. In addition, by presenting objects that have appeared at different times within the video simultaneously, BriefCam enables the review of hours of video in minutes, dramatically increasing investigation productivity.

brivo

Tens of thousands of customers rely on Brivo to secure their facilities using our cloud-based security platform, Brivo OnAir®. With just an Internet connection, both small and large businesses can manage their security operation with Brivo OnAir®. From access control and video surveillance to credentialing, Brivo offers future-proof functionality with automatic updates at a fraction of the cost of on-premise solutions.

Enabling easy-to-manage building access control to unite your facilities, secure your assets, and protect your people - Brivo Onair is a modern unified security platform that combines physical access control and video monitoring.

The Brivo Onair solution is built for today's connected business people. From unlocking doors, to recording surveillance video, to giving access permissions to new employees and contractors, Brivo offers a secure physical access control solution through the cloud.

EAGLE EYE NETWORKS, INC.

Eagle Eye Networks was created to make video security easier for all of us. Camera systems have traditionally been pretty complex, challenging for most people to manage, and costly. Eagle Eye is bringing the latest modern web and cloud technologies to make cameras easier to use, more accessible, and more robust. They believe that by doing this, it will expand the applications. The goal is to eliminate a tremendous amount of headache by putting everything in the cloud where iMotion can take care of it and you don't have to.

With the Eagle Eye Security Camera VMS you can deploy analytics on one camera or multiple cameras - on any type of camera - and you can do it without installing software or buying larger servers. It's all done in the cloud on our servers. The Eagle Eye Cloud VMS is a cloud security camera system which provides 100% cloud management, 100% mobile and web browser viewing, and if you want - 100% cloud recording. This cloud video system has been architected from the ground up to be all cloud all the time.

anyVISION.

AI Designers & Security Veterans combined. Together, they have built the world's leading recognition platform, used across multiple industries globally. Based on 20+ years of academic research and field experience.

AnyVision is a leading provider of self-learning, AI-based person-and object-recognition software. A plug and play solution for new and existing systems that overcomes challenges such as occlusions, different angles of view, and poor light conditions.

Among other things, it can be used to find and identify missing or wanted objects or persons in large crowds, to support the work of authorities such as the police, and to optimize processes. Use cases can also be found in locations such as hotels, casinos, airports, sports venues, and retail outlets, where the technology is used to identify VIPs and enhance customer experience with special offers, services, and seamless access.

CDVI

CDVI Americas is an access control system manufacturer responsible for the development, marketing and sales of access control products for North, Central and South America markets. CDVI sells exclusively through their distribution partners. CDVI offers a complete range of access control solutions; stand-alone and PC based access control, cards & readers, keypads, wireless products, biometrics, locks and accessories. CDVI has a wide range of products that cover many applications, including, office complexes, apartment buildings, government offices, university campuses, hospitals and can also cover establishments requiring a higher level of security, such as airports, hydro, telecommunications and other critical infrastructure. Our newest product, ATRIUM, is a technology advanced controller that has a webserver built in on-board along with many features not found in other access control products. CDVI Americas is part of the CDVI Group, with subsidiaries located throughout ten countries, distributing access control products on a worldwide basis.

UNV

Uniview is the pioneer and leader of IP video surveillance. Firstly introduced IP video surveillance to China, Uniview now is the third largest player in video surveillance in China. Today, Uniview has the 5th largest global market share.

Owning innovative R&D teams and industry-leading quality control ability, Uniview stepped into overseas market in 2014.

Uniview has complete IP video surveillance product lines including IP cameras, NVR, Encoder, Decoder, Storage, Client Software and app, covering diverse vertical markets including retail, building, industry, education, commercial, city surveillance etc.

Our aim is to become a global leader in video surveillance industry which endeavors to build a safer world by providing professional, reliable and cutting-edge products and services.

ISS – Intelligent Security Systems headquartered in Woodbridge, NJ, and with offices worldwide, is a leader in video management and video analytics software. ISS provides a comprehensive line of digital security and surveillance video solutions which are on the forefront of on-demand security, allowing for centralized command and control of an entire enterprise security network.

Intelligent Security Systems, ISS, is a world leading developer of security surveillance and control systems through audio and video capture, recording, and analysis of patterns, of video images and digital data transmission. ISS provides a comprehensive line of digital video surveillance solutions that are at the forefront of security, with the ability to be tailored to each project, allowing centralized command and control of an entire enterprise security network in a single place.

Nedap Retail specialises in loss prevention, stock management and store monitoring solutions for retail stores. The main focus in this respect is to make the stores more sustainable, a safer place and more profitable. For the loss prevention solutions, the main focus is the shopping experience of the customer. The security must not create any hindrances and must fit the shop interior. On the basis of this idea, Retail developed an elegant Plexiglas design gate for H&M, featuring the very latest patented detection technology. Retail started in 1974 when Nedap was asked by C&A to think about improved antitheft security. Since then, Retail became a pioneer of antitheft systems. In order to maintain this advantage, advertising panels, customer counters and metal detectors were incorporated into the gates over the years.

Lyngsoe Systems A/S Library Business Unit has signed an agreement to acquire Finnish-based P.V. Supa and its related companies in UK (2CQR) and US (P.V. Supa Inc.). This acquisition will be transformational for both companies and bring added benefits to our existing as well as new customers. With our combined capabilities, complementary solutions, and not least shared customer values – we will to an even higher degree deliver on our ambition to work for smarter libraries of the future.

P.V. Supa offers solutions for materials handling, return and sorting, that are designed to fit your specific budget and space requirements. We offer solutions that will fit small spaces to systems that service very large and complex central sorting operations. Every situation is unique with specific requirements; our trained staff and engineers will work with you to design and install the system to fit your specific needs and requirements.

CERTIFICATIONS

and professional associations

Licenses, Qualifications and Accreditations

Obtaining certification is a reflection of the will of the company to position quality, professionalism and know-how at the forefront of its priorities. Our quality and service are frequently recognized by many external organisations. Many of these awards and accreditations are made on a national basis.

iMotion security is committed to providing the best possible service to its customers and users. Our actions are part of a sustainable development and continuous improvement approach.

The National Assembly of Quebec passed the Private Security Act which came fully into force on 22 July. This new Act represents a major reform of the private security industry and follows a long period of reflection and exchange between the people of the private security industry and the Ministère de la sécurité publique (MSP).

The new Act replaces the Act Respecting Detective or Security Agencies which dated from 1962. It requires that any individual who carries on private security activities in Quebec, must now hold an agent licence. It also requires that any person who operates a business providing one or more private security activity must hold an agency licence of the appropriate class for the activities offered. The Private Security Act applies to six distinct class of private security activities, which are: security guarding, investigation, locksmith work, electronic security systems, transport of valuables and security consulting.

The Régie du bâtiment du Québec (RBQ) has been created in 1992. Its mandate is to ensure the quality of construction work as well as the safety of people in the fields of building, electricity, plumbing, gas, petroleum equipment installations, pressure vessels, elevators, passenger ropeways, amusement park rides and public pools and beaches. The RBQ fulfills its mission by adopting standards with regard to building, safety, financial guarantees and professional qualifications, by issuing licences and permits conferring their holders with the rights of exercising, and by overseeing the application of the standards established through regulations.

iMotion Security holds a license from la Régie du Bâtiment du Québec: Find us on the RBQ licence holders repertory - search for #5596-1577-01 Intercommunications, telephone and surveillance. This subclass authorizes construction work that is not reserved for electricals relating to intercommunications, telephone and surveillance systems, and similar or related construction work.

CANASA will be the recognized voice of security in Canada. iMotion Security is a proud member of this association. Established in 1977, the Canadian Security Association (CANASA) is a national not-for-profit organization dedicated to advancing the security industry. They protect and promote the interests of its members and the safety of all Canadians through education, advocacy, and leadership.

The Canasa is a recognized voice of the security industry in Canada and have a growing membership of more than 1300 member organizations in 10 Chapters and Sub-Chapters across the country representing all segments of the industry. The Canasa support their members through a comprehensive network of services, including: high quality security education; leading industry trade shows; government relations and advocacy work; marketing and communications; and the latest industry information and news.

The construction industry is a major sector in Quebec, generating some \$30 billion in investments every year. The hundreds of thousands of people involved in the industry, and the companies that employ them, must be constantly on the move throughout the province. This economic activity requires the contribution of many individuals and companies, including architects, engineers, suppliers of materials, workers, and contractors. Together, they form the teams that build bridges, houses, schools, factories, and businesses.

The Quebec construction industry has adopted criteria for hiring workers to which construction companies must conform. The fundamental principle is competency, acquired through training and/or on-the-job experience. To demonstrate their competency and to work in the construction industry falling under the Act Respecting Labour Relations, Vocational Training, and Workforce Management in the Construction Industry (Act R-20), all the iMotion technicians hold a competency certificate.

The Commission de la santé et de la sécurité du travail (CSST) is the organization to which the Government of Québec has entrusted the administration of the occupational health and safety plan. For this purpose, the CSST sees to the application of the following two Acts:

the Act respecting occupational health and safety, the purpose of which is to eliminate at the source dangers to the health, safety and physical well-being of workers;

the Act respecting industrial accidents and occupational diseases, the purpose of which is to compensate for work-related injuries and their consequences for workers, as well as the collection, from employers, of the sums necessary to fund the plan.

iMotion Security holds a certificate of compliance from the CSST.

In the last 30 years, the frequency rate of accidents with injuries in the construction industry has decreased by over 300%. In addition, the number of injuries and serious sequelae following falls have also declined significantly, due among other things, to the wear of the safety harness. More efficient and comfortable, it is now part of everyday life of many workers.

Today the ASP Construction provides training to entrepreneurs and workers that understands that the acquisition of knowledge and skills as well as developing expertise in prevention helps them implement effective measures to eliminate the source of hazards and maintain safe and healthy working conditions on construction sites.

Every technicians at iMotion Security holds a certificate from the ASP Construction.

MOBILE SERVICE

Installation - service - maintenance

iMotion Security provides competent service technicians who will execute all installation, maintenance and repair tasks that your alarm, video monitoring, access control, or other systems, may need. Well-trained to handle cutting edge security technology, they make routine inspections and will thoroughly teach you about any security system installed in your home or your business.

iMotion Security has a large fleet of mobile service units. All of our trucks are equipped with a wide range of tools, parts and accessories. So, our service technicians can work professionally and efficiently from the very first service call, and this, according to the highest quality standards of the industry.

iMotion Security is proud to offer the most exacting customers unrivalled customer support. With this goal in mind, our commitment is based upon the following pledge: prevention, quick response, efficiency and performance. Thank you for considering iMotion Security's products and services - we guarantee we'll make every effort to satisfy your highest demands.

ONLINE PRESENCE

Website and Social Media

Increased Presence on the web

At iMotion, we know that maintaining and controlling a strong, focused and relevant web presence is crucial. It all begins with design and clarity. Our experience has taught us that a beautiful and clear website is one of the most efficient and cost-effective ways to generate leads for our business, especially if it's built and marketed properly. Our website receives more than 30 000 visitors per year.

Social media is becoming an integral part of life online as social websites and applications proliferate. For our business, social media is used to market products, promote brands, connect to current customers and foster new business. We can also respond very quickly to both positive and negative feedback, attend to customer problems and maintain, regain or rebuild customer confidence.

SECURITY & COMPLIANCE

iMotion with a clear vision and mission can design a comprehensive security solution, that will ensure the protection of your cannabis sites.

Our engineers have combined the best technologies of the largest and most serious manufacturers on the market. These technologies, once unified on a single platform, become a winning recipe for an industry which is in full effervescence and in constant evolution. In addition, our systems are designed to adapt to your production and expansion.
