CREATORS OF

# SOLUTIONS

What sets iMotion apart from anyone else in the marketplace is the fact that we are very exceptional in how we think about risk and manage risk - those two things really differentiate iMotion from many other providers.

The pillars that are at the heart of iMotion, are trust, innovation, excellence and passion. Trust, for example, is very important to us, when you look forward to a data economy and what it means to serve your clients. We're in the data economy and trust is a new currency.

Technology for iMotion is connecting for common good. A very simple statement, but a really important statement to us. It is a form of collaborating and bringing together solutions that are going to serve the industry and our clients. iMotion has taken a strategic and deliberate choice in being a change accelerator. It allows us to take our future forward. Accelerating change for us means that we will help you through that change, through our products and services - one where you don't have to worry about the solution. As you collaborate with us, we will do the engineering, we will do the design and we will lead you into the future.

We are in an interesting period time now, where the world is getting more complex and requires some creative solutions. ||

**Frederic Abenaim**  
CEO and Founder

Integrator of comprehensive IP solutions, iMotion favors standardized systems of its partner network, ensuring the durability, interoperability and scalability of all solutions implemented.

## EXPERTISE & EFFICIENCY

iMotion Security's relentless commitment to impeccable service resulted in a substantial increase in shares of a highly competitive market. Focused on maintaining the highest level of proficiency, our advisors and technicians constantly attend different manufacturer presentations in order to offer our customers cutting edge digital security technology.

Our expertise, our savvy advice in security matters, and our ability to understand our customer's needs mean that we can always offer the best possible results and the most value for your money.

**imotion.ca**  
Intégrateur en sécurité / IP Security Integrator

**Capable** Able to combine all technologies using Internet protocols, iMotion guides its clients in the implementation of solutions. From analysis to consulting to full deployment of the solution.

The iMotion Project Management Team structure will be tailored to provide an effective organisation capable of managing all aspects of this project and to deliver a concise design. The Project Manager and his/her team will work throughout the project to ensure the design programme objectives are planned and managed within a defined operating framework that brings together all the activities and disciplines involved, thus ensuring all relevant parties are fully aware of project progress.

## INTEGRATED SOLUTIONS FOR

# IP CAMERA SURVEILLANCE

The video surveillance market is booming, driven by increased public and private security concerns, as well as a technology shift. The transition to network video is a reality as customers take advantage of flexible, industry standard systems for security and video surveillance.

As security management over the IP network expands and intelligence capabilities move out to network cameras, systems can scale much more easily. This move to open systems empowers a much more productive and cost-effective means of surveillance than was ever possible. For the security manager, the shift to network video creates new opportunities where digital technology can be put to use to deliver maximum value.

## Our Video Surveillance Partners

Honeywell

HIKVISION

"PREMIER" MILESTONE PARTNER

# VIDEO MANAGEMENT

Milestone XProtect® video management software (VMS) brings all the puzzle pieces for video surveillance together in a perfect combination to create a solution that keeps people and property safe today - and tomorrow.

When you invest in a video surveillance system, you invest in much more than hardware and software. You invest in safety for your home, business, people and assets, so you can protect what matters the most. Choosing XProtect as your foundation means choosing a VMS developed by innovative surveillance experts who work to solve the challenges you have today and in the future. With 30+ years on the market, XProtect has proven to be the right answer for more than 500,000 installations worldwide - from flower shops to universities, stadiums and cities.

SIMPLIFIED SECURITY WITH CENTRALIZED MANAGEMENT

# CLOUD VIDEO SOLUTIONS

With the help of our technology partners, we're on a mission to modernize enterprise physical security.

Today, we offer a suite of connected security devices that provide users with a full picture of the health and safety of their environments. Designed with simplicity in mind, Verkada's ecosystem of best-in-class solutions provide a scalable way to easily configure, monitor and respond to events from anywhere. The cloud-based platform that integrates insights across the entire suite of Verkada products, including video security, access control, video intercom, air quality sensors, alarms, visitor management and mailroom products.

Honeywell

## FROM REACTIVE TO PROACTIVE SECURITY

# IP AUDIO FOR SECURITY

Network audio systems are complete high-quality audio systems you can use in various situations improve security on your premises with event-triggered announcements and direct callouts. Make live or scheduled announcements in different zones, at the right time and right place. Create ambiance with easy and flexible scheduling of great-sounding background music. All while enjoying the many benefits of a network audio system.

Network audio systems are intelligent devices, just like IP video cameras, and offer many of the same types of benefits. Audio networking allows you to transport very large amounts of data over a single network cable. The bandwidth for modern networking transport protocols is enough to carry hundreds of audio channels without the compression once necessary to do so. This means that audio can be moved quickly over long distances without signal degradation or the expense of conventional analog cabling.

The flexibility demanded by data network protocols also opens up possibilities for audio system configuration that were once impossible. Because networked audio is digital, electromagnetic interference and cable capacitance that can degrade audio signal quality in the analog domain are no longer problematic.

Manually or Event triggered prerecorded message

Live call out and automatic notification to security guards

Audio management platform available for all company sizes

## ENHANCED SECURITY MONITORING AND RESPONSE

# ACCESS CONTROL

Whether you have one or several buildings to secure, and whatever the number of users, Motion offers flexible, modular access control solutions tailored to the needs of each customer: multi-site, multi-building, multi-station.

Access control involves ensuring that an individual has the necessary rights to access a site, building or premises. It allows you to organize the movement of people within a site, and selectively manage access to different areas. In this way, access to sensitive areas can be restricted to certain users, according to predefined time slots, with all movements recorded in a history.

Motion uses all types of identification technology, from the simplest to the most advanced. The choice of technology for an access system depends on a number of criteria. Security is the most important, but ease of use and convenience are increasingly crucial.

## AUTOMATE PACKAGE DELIVERY WITH SMART LOCKERS OR PARCEL ROOMS

# PARCEL DELIVERY

Every building requires a simple and smart parcel delivery option. iMotion can provide a complete parcel delivery system for multi-residential buildings.

### Parcel Room

Avoid stacks of overflowing boxes and contribute to the safety of parcel deliveries. With our parcel room program, you get a solution that offers more storage per square meter. Luxer Room is a simple technology that adds a layer of controlled access to any parcel room. Carriers deliver directly to the room with their access code. Parcel recipients receive a text message with a one-time access code to enter and retrieve their parcel. Video surveillance and access logs ensure security and accountability.

### Parcel Lockers

If you decide to opt for parcel lockers, this solution offers carriers end-to-end access and secure storage for parcel deliveries. Once in the building, carriers can deposit deliveries in one of Luxer One's intelligent parcel lockers. After receiving their delivery notification on their app, residents can visit the location and collect their parcels.

### Our Parcel Management Partners

ASSA ABLOY

MOSINO

## SOLUTIONS FOR

## VISITOR MANAGEMENT

It's essential to secure the workplace and grant access to the right people. A visitor management system is a software-based approach that optimizes the customer experience while reducing the operational costs associated with entering the workplace.

Over the past two decades, the role of the corporate reception area has changed completely. Previously purely aesthetic, it is now a tangible expression of corporate identity, value and mission. For seamless, compliant access to your workplaces and production sites, a visitor management solution can help you integrate security, health and safety, brand promotion, customer communication and confidentiality.

Welcome your employees, subcontractors and visitors with customized registration screens that reflect your corporate image. Whether it's logos, color schemes or images in your safety instructions, always project your company's image.

## INTELLIGENT RFID

# GUARD TOUR SYSTEM

## What is a Guard Tour System?

A guard tour system is an essential tool which enables to monitor if people assigned to a tour patrol task are completing their duties on time and at their correct locations. In summary the system makes it possible to know where and when the patrols were made.

## How does the System Work?

It works by installing a series of RFID Tags (each with its own unique global identification number) along patrol routes and having patrol personnel perform readings on the tags using a hand held reader. The recorded tag numbers along with each associated time stamps are later uploaded via communication adapters to computers for processing and verification. The results are displayed on the screen, printed or emailed so that managers can review at once job performance data of the patrolling personnel (attendance, locations patrolled, timeliness, incidents and etc).

Our latest Guard Tour Reader with LED lighting works with built-in rechargeable lithium battery and integrates an automatic active contact-less continuous reading system in an aluminum alloy body. With this system, you get an autonomous and indestructible reader with zero maintenance. The reader can automatically detect if it was dropped and generate an history report.

Product Brochure

**RESPONSIVE PERIMETER INTRUSION DETECTION**

# PERIMETER SECURITY

**Detect and respond**

A networked perimeter solution incorporates sensors that continuously measure and report on wire tension and monitor fence structure vibration or movement. Sensors can be used with or without an energized pulse to detect intrusion without the intruder being aware.

The system intelligently differentiates between serious breaches and disturbances by wildlife, birds or harsh weather conditions. False alarms are prevented, and intruders are unable to use the cover of adverse weather to breach the fence undetected. When a fence sensor is triggered an alarm will activate for that zone, allowing guards to immediately focus their attention where it's most needed.

Full integration with imaging systems provides a visual and audible record of events that can be viewed as a live stream or relied upon as evidence if required.

Effective security fencing requires unique custom design and construction to meet the challenges of individual sites. Gallagher has focused on developing reliable fencing hardware that is easy to install, easy to maintain and designed to cope with different site challenges.

Every site has individual challenges, and the flexibility of Gallagher's perimeter security solutions enable those challenges to be met and overcome.

## LIVE VIDEO SUPERVISION SOLUTIONS

# VIDEO MONITORING CENTRAL STATION

Our trained operators can monitor multiple areas of your site simultaneously at a fraction of the cost of using traditional on-site security guards. A real-time proactive video surveillance system provides instant visual confirmation, putting an end to false alarms.

Our real-time video surveillance installations use state-of-the-art video verification options that are both efficient and accurate. Our monitoring station is capable of instantly receiving any detection of human activity or vehicles entering a monitored perimeter. Our intelligent cameras are able to link HD-quality video footage to our central monitoring station where our professionally trained operators will assess the situation and take appropriate action. Authorities will only be dispatched in the event of a serious case, which has been validated by our technical staff. This video evidence can be sent to your mobile device as well as to the police for investigation.

When you switch from traditional guard services to real-time remote video monitoring, your security operation costs will drop drastically, possibly by half. In fact, VideoPatrol's a la carte services offer so much more, at a fraction of the cost, than traditional guarded services.

## ACCESS SOLUTIONS FOR HOTELS

# HOSPITALITY SOLUTIONS

Whether for a large-scale hotel brand or an independent boutique property, ensuring guest and staff safety means being able to manage who has access to onsite areas and when. With ASSA ABLOY Global Solutions, empower your hotel business with the advanced technology it takes to ensure seamless room entry for guests and employees while safeguarding them against potential threats to their security. An access management system is what essentially serves as the beating heart behind modern hotel security access operations. It's what grants and revokes access to specific hotel areas, and it's what alerts hotel staff to suspicious activity that may represent a security threat.

With more ways to interact with electronic locks and as new types of safety risks continue to arise, it is vital to have one seamless, coherent solution that brings everything together, ensuring simple, intuitive security.

Our access management solutions are designed with today's hotel security needs in mind, representing the latest that the industry has to offer in both functionality and design scalability.

Able to seamlessly connect to all onsite security access hardware, both wired and wireless, access management technologies by ASSA ABLOY Global Solutions are your ultimate key for secure communication and real-time monitoring that ensures no risk to guest or staff safety is ever overlooked.

## VIDEO RECORDING SOLUTIONS FOR

## INTERROGATION ROOM

iRecord is the leading on-demand high definition digital audio and video recording, broadcast and content management solution. iRecord cost effectively helps organizations record, store, distribute, manage and utilize critical audio and video recordings. iRecord is "purposeful" technology because it helps public safety cost-effectively increase efficiency, effectiveness, and productivity helping them better serve and protect.

When conducting a police interview, reliable and easy-to-use recording equipment is essential to the long-term viability of the case. Interrogations are only as effective as the usability of the insights that have been extracted, and that's why a video recording systems is essential to help you not only hear what's important, but see what's left unsaid.

**What was the body language of the person being interviewed?**  
**Was the attitude or the demeanor of the suspect inconsistent?**

High-quality visual recording allows you to capture more in the interview while allowing you to retrieve and share quickly across teams to keep your evidence secure.

## INTELLIGENT WIRELESS SYSTEMS

## INTRUSION ALARM

AJAX security systems are the best and most modern wireless security systems available on the market. Protect every home, business or even factory with AJAX Systems' detectors. Detect burglars, fire or water damage in a split second and prevent damage to your valuable property.

Ajax protects your family and business from burglars, fires, and leakages. If trouble comes, the system immediately activates sirens, notifies users, and requests help from an alarm response company. Ajax can be easily expanded with entry, fire and flood detectors, as well as relays for managing electrical appliances remotely.

You can purchase and add additional devices to the system individually. Detectors can be connected with a few taps in the mobile app. The moment someone enters a secured area, the detector makes a series of photos. Ajax delivers the first snapshot within 9 seconds following the motion alarm. To ensure privacy, MotionCam activates its camera only when triggered.

Ajax operates on a real-time operating system, which ensures flawless execution of every command. Such operating systems are used in robotics, aviation, and military - in every field with no place for mistake.

## AUDIO-VIDEO SOLUTIONS

## IP INTERCOM

Network intercoms combine video surveillance, two-way communication and remote-entry control in a single device. Ideal for entrances and exits, or spread out over a larger area, they help to enable better overall security.

Intercoms offer secure, barrier-free entry. They let you to speak with your visitors face-to-face from remote locations and thanks to outstanding audio capabilities, you can be sure to hear the conversation clearly. They also include accessibility features for hearing impaired individuals. Plus, models with an integrated access control reader (RFID) allow for secure, hassle-free physical access to premises for employees and known visitors.

- Visitor entrance systems
- Vehicle access and security
- Secure access solutions for school doors
- Emergency elevator access and communication
- Security, access and communication for car parks

## Our IP Intercom Partners

## SECURITY SOLUTIONS BASED ON

## ARTIFICIAL INTELLIGENCE

As AI is increasingly adopted across all sectors, edge-based AI (which filters and processes data locally on a camera) is increasingly being integrated into video surveillance to enable end-to-end AI technology. Today, most security cameras send the data they collect to servers for analysis. However, with embedded AI, the data is first analyzed by the camera, then sent to the server. This reduces the burden of transferring and storing large amounts of data to a server, increasing efficiency, saving time and reducing the server costs typically required to analyze the data.

By being able to distinguish vehicles and humans from other objects, Wisenet cameras equipped with edge-based AI analytics reduce the occurrence of false alarms derived from the use of motion detection while increasing operational efficiencies in forensic review.

AI cameras detect and classify people, vehicles, faces, license plates and more in real-time. The cameras' deep-learning algorithms can reliably identify multiple distinct objects. Reduce false alarms due to non-interesting motion, like wind-blown trees, shadows, or animals. Analytics become a reliable second pair of eyes to operators helping them know where to look for important real-time events, while making post-event forensic searches highly efficient.

## CAMERA SOLUTIONS - ANTI-CORROSION AND

## EXPLOSION-PROOF

We offer a range of proven CCTV products, certified and made of stainless steel, designed specifically for use in hostile environments, whose prerogatives are high corrosion resistance, quality, and reliability. The range comprises robust, long-lasting CCTV products and systems. It has been specifically manufactured to withstand the following CCTV applications: Oil & Gas, Marine, Industrial, Infrastructure, Wind farms and Homeland Security.

**TVTherm - Intelligent Solutions for Oil & Gas**

TVTherm is an innovative software that continuously monitors industrial areas and automatically detects anomalous events. It's a hardware and software solution, based on infrared thermography and real-time computer image processing. TVTherm increases operations' efficiency, environmental compliance and personnel safety.

TVTherm thermal cameras can detect gas leaks and liquid spills, flames, hot/cold spots, people entering into dangerous areas or losing consciousness. It can monitor flares as well as tank levels. TVTherm can detect events accurately and at safe distance, covering wide areas and places that are difficult to reach with traditional contact instruments.

## POWERFUL SURVEILLANCE TOOLS

# THERMAL CAMERAS

Any object with a temperature above absolute zero emits a detectable amount of infrared (IR) radiation. The higher the temperature of an object, the greater the intensity of the IR radiation emitted. By taking advantage of the differences in IR intensity between objects, thermal imaging cameras make invisible IR 'visible' in the form of images of heat zones.

Covering security, thermography and commercial vision, the thermal cameras we offer guarantee multi-level situational awareness in a range of scenarios such as perimeter protection, temperature measurement and fire detection.

They 'see' at great distances, whatever the light and weather conditions, and distinguish people and vehicles from other objects thanks to deep learning capabilities.

Complemented by visible light imaging and visualized metadata, thermal cameras are the ideal choice for 24/7 event and emergency awareness.

HIKVISION

## NETWORK INFRASTRUCTURE - FIBRE OPTICS AND

# STRUCTURED CABLING

Effective communication between your company's various equipment and departments depends, to a large extent, on the structured cabling and fiber optics that connect them. Well-designed and correctly installed computer cabling is essential for optimum network performance. At iMotion, we pay close attention to every detail when designing and installing your network infrastructure. We take into account factors such as bandwidth capacity and data security.

We work closely with our customers to understand their needs and design tailor-made solutions. Whether you're setting up a local area network (LAN) or extending your network to multiple sites, we have the expertise to make your project a reality.

Our team is trained in the latest computer cabling standards and technologies. Whether you need structured cabling for your new office or an upgrade to your existing infrastructure, we're here to help. We understand the importance of a solid network infrastructure to the smooth running of your business.

With iMotion, you can have peace of mind, because we ensure that all cables are installed professionally and securely. We use quality products to ensure optimum performance and long-term durability. Our aim is to provide reliable cabling solutions that meet your needs now and in the future.

Honeywell

## INCREASED SECURITY WITH

## RADAR DETECTION

By nature, radar isn't dependent on visibility. And it's not "flooded" into reacting erroneously to things like moving shadows, beams of light, small animals, or insects. So you get reliable detection and keep false alarms to a minimum.

Radar detection combined with security cameras is a powerful combination that enhances surveillance and security systems in a variety of applications. When integrated with security cameras, it offers several advantages that make it a valuable tool for complete security solutions.

**Increased detection range** : One of the main advantages of radar detection is its ability to detect objects over longer distances than traditional motion detectors. This extended range enables security personnel to identify potential threats or intruders long before they enter the camera's field of view. This early detection can give more time to react and mitigate security risks.

**Works anytime** : Unlike optical cameras, which can be hampered by adverse weather conditions such as heavy rain, fog or low light levels, radars operate effectively in virtually all weather conditions. This means that even in difficult environments, the security system remains operational, reducing the risk of missed events due to poor visibility.

**Reduce false alarms** : Radar detection technology is less prone to false alarms triggered by environmental factors such as moving tree branches, shadows or small animals, which are common problems with traditional motion-based security systems. This minimizes unnecessary alarms and allows security personnel to concentrate on the real threats.

## ADVANCED SOLUTIONS

# EQUIPMENT MANAGEMENT

Taka's equipment management solutions provide secure storage and advanced management for sensitive assets and devices, with strictly controlled access and complete traceability. It's likely that daily tasks critical to your business' success require staff use of expensive devices and equipment. If these items are not readily available, staff can't perform their jobs, customers' needs aren't met, safety obligations can't be fulfilled and efficiency is drastically compromised. With the use of our intelligent locker systems and Taka Web management software, Taka offers unparalleled asset security and monitoring to virtually any environment.

Our intelligent locker systems offer an efficient and secure way to manage the assets in use every day. When not in use, your assets are safely stored within one of our secured locker compartments, and when it's time to put that asset to use, it is automatically allocated to authorized users. You control who can gain access, and when. And with a complete audit trail of every user and item transaction, your staff is now 100% accountable for the assets they use. Through Taka's deep integrations, your assets can become tools that drive your critical processes like never before. Restrict a user from exiting a facility until higher sensitive asset has been safely returned, or change access permissions for entire departments through your existing HR database. The possibilities are endless.

Product Brochure

POWERFUL SOLUTIONS FOR

# LICENSE PLATE RECOGNITION

License plate recognition is a powerful tool for access control, traffic monitoring, toll collection and travel time measurement.

Reliable license plate recognition (LPR), also known as automatic license plate recognition (ANPR), has traditionally been expensive and limited to a few applications.

The rapid development of IP cameras and deep learning is now enabling the wider use of automatic LPR solutions. Depending on your needs, they can help boost day-to-day efficiency, service levels and security.

Our LPR solutions consist of a specially designed camera with pre-installed Axis or partner analysis tools that run either on the camera, in the cloud or on a server. The analysis automatically captures the license plate in real time, compares it or adds it to a list, then takes appropriate action, such as opening a gate, adding a cost or generating an alert.

Depending on the ambient light, the solution may require cameras with integrated infrared light or additional light sources for optimum performance.

Our Partners in this segment

## INTELLIGENT SOLUTIONS

# LOCKER MANAGEMENT

**Callagher Locker Management enables a site to manage locker access, automate allocation, and ensure the best possible use of locker resources, all natively from the Command Centre.**

Callagher's fully integrated Locker Management Solution allows a site to manage locker access, automate allocation, and ensure the best utilization of their locker resources all natively from within Command Centre. Flexible allocation times and a dynamic locker viewer combine to make agile locker use a reality for the modern business. To be allocated a locker, the cardholder need only present their credential at the T30 Terminal located near the locker bank. Their allocated locker is displayed on screen along with the date/time that access will expire.

If a user has been allocated multiple lockers, the user can select which locker to open. For administrator or system automated allocation, cardholders can be informed of allocation via email or SMS.

**Support for PIN and user code.**

Support for most credentials including DESFire® EV2 cards and mobile credentials. Mobile credentials are hosted in the Callagher Mobile Connect App (which uses Bluetooth® wireless and NFC technology).

## KEY MANAGEMENT SOLUTIONS FOR VEHICLES

# FLEET MANAGEMENT

With Traka's fleet solutions, you now have a powerful way to track and manage all of your organization's vehicles.

Managing an organization's vehicle fleet is not an easy task. With potentially thousands of vehicles to track and maintain, and an equal number of drivers collecting and returning keys each day, it can quickly consume valuable administrative resources.

Whether you are a local business with ten trucks, or a global distributor with thousands of vehicles on the road, Traka makes the management process efficient, secure and effortless. In addition to providing an automated method of distributing and collecting keys, Traka records every key transaction and provides full audit details for better user accountability and lowered administration costs.

By decentralizing, Traka can safely store keys where they are needed most, while allowing fast and easy access for authorized users, and centralized management from any authorized device on your local or wide area network. Each key set is electronically tagged with our durable iFob, which uniquely identifies it to our secure key cabinets and intelligent software. The ultimate value of Traka lies in our ability to integrate into the systems you already use, making administration easy, increasing visibility on critical fleet data, and enabling realtime workflow that improve your operational processes. Traka gives you total control over your fleet keys and assets like never before.

Download the  
Product Brochure

CENTRALIZED SOLUTION FOR

# CAR PARK MANAGEMENT

Managing car park allocation and access can be complex. Callaghan's Car Park Management Solution simplifies this process and allows you to easily manage car park access, assignment, and occupancy from within Command Centre. The Callaghan Car Park Management Solution allows you to flexibly configure the car park environment and its parking spaces to suit your site's needs.

Inefficient or unauthorized car park use costs money and inconveniences car park users. The Callaghan Car Park Management Solution allows building owners or site managers to maximize use of available parking spaces and respond quickly to non-compliant use.

The Command Centre's parking lot management functions are unique in that they enable site managers to effectively manage access control and parking lots from a single system, saving time and money and improving situational awareness.

Parking sections can be allocated to tenants in multi-tenant sites, with the option of allowing tenants themselves to manage the day-to-day allocation and occupancy of parking spaces within their section.

Download the  
Product Brochure

## INNOVATIVE SOLUTIONS

# KEY MANAGEMENT

*Control access and maintain accountability with intelligent key management.*

Traka's key management solutions turn conventional keys into clever keys that do much more than just open doors. They become a critical tool in increasing accountability and visibility over your facilities, vehicles, tools and equipment.

We find physical keys at the core of every business, for controlling access to facilities, fleet vehicles and sensitive equipment. When you can control, monitor and record your company's key use, your valuable assets are more secure than ever before.

Beyond securing and managing access to keys, Traka solutions can generate unique workflows that support the important processes of your business - require a secondary authorization for master keys, pair key sets to guarantee the lockout of hazardous systems during maintenance, or set curfews which automatically send notifications to administrators, managers or users.

Managed by Traka, the key inventory you already have goes beyond being a tool to unlock a door or start a vehicle, it becomes an instrument to influence the core of your daily operations. Integrated Traka key systems have the flexibility, scalability and customization options to benefit any size organization.

VEHICLE SOLUTIONS - PARKING, PERIMETER ACCESS AND TOLL BARRIERS

# SECURITY BARRIERS

Automatic Systems, a world leader in the automation of secure entrance control, designs and manufactures pedestrian & vehicle physical access control equipment.

Almost 50 years ago, Automatic Systems marketed its first rising barriers. Today, with all our experience and our wide range of vehicle access control equipment, we provide the answers to your problems.

Whether your need concerns toll lanes, parking areas, access to bridges, tunnels, level crossings, or the closure and entry control of private or industrial sites, you'll find the right product for your application in our range of barriers.

Download the  
Product Brochure

**PEDESTRIAN PRODUCTS - SECURITY & REVOLVING DOORS, PORTALS, SWING GATES**

# TURNSTILES & SPEEDGATES

Thanks to the wide variety of Automatic Systems pedestrian products, we have solutions for infinite different pedestrian entrance types. From a small swing gate to a discreet and elegant speedgate, to a high security portal, Automatic Systems has the product for your lobby.

**SPEEDGATE TURNSTILES**

The speedgate turnstile category includes the SlimLane glass optical barrier turnstile. Its ability to control large flows of people make this swing obstacle turnstile one of our client's favored choices. It is the ideal product for entrances in prestigious buildings and has many different cabinet options to facilitate the integration of contactless biometric peripherals.

**TURNSTILES**

The TriLane was designed as an efficient indoor and outdoor entrance control turnstile. Its robustness and low energy consumption make it a must-have for areas with a moderate security level and a high traffic flow. They fit perfectly in gyms, recreational centers, museums, amusement parks, etc...

**SECURITY DOORS, PORTALS AND REVOLVERS**

These high security doors are mainly found at the entrance of buildings that require the highest level of security such as Data Centers or sensitive locations.

Download the  
Product Brochure

## Building Automation and Control

# BACnet SOLUTIONS

BACnet is a data communication protocol for building automation and control networks. It is the national standard in over 30 countries, including the United States and Europe, and an International Organization for Standardization (ISO) global standard.

In a cost-driven and energy-conscious business environment, you need to have confidence that your building management services are running correctly and not consuming power and resources when they aren't required. High-level communication between Command Centre and building management systems using the BACnet protocol provides opportunities for significant cost and energy savings.

### Features and Benefits

Create a central repository for all alarm management, to monitor and control your HVAC (heating, ventilation, and air conditioning) and other business management systems through Command Centre. Visibility of all services on site at all times ensures rapid response capability. Integration with building management systems improves monitoring and reduces operational expenditure. Integration with resource booking systems identifies when a room is not in use and turns off lights, air conditioning, heating and locks the door.

Only people with the correct access privileges can activate services. BACnet devices can trigger alarms within Command Centre to keep you fully informed of operations on your site, providing time to discover faults before they become more difficult and expensive to fix. For example, generator faults, high and low temperature zone alarm, chiller failure, filtration pressure alarm, fuel control system overflow, underfill or failure alarms, and general mechanical fault alarms.

## BIOMETRIC SECURITY SOLUTIONS &amp;

## FACIAL RECOGNITION

**Video Analytics to ensure a safer environment**

Today there is an immense influx of videos and images due to the prevalence of CCTV streams, smartphones and more. Augmented Vision can survey areas of interest in real-time. It can be used to prevent security incidents in highly frequented public or private spaces but also to ensure frictionless access to restricted areas for authorized personnel, while protecting citizens' privacy with the highest level of data protection.

**Protecting areas of interest and streamlining access**

Augmented Vision analyzes hours and days of video streams and thousands of photos to help find subjects and objects of interest in post-event investigations. Idemia Augmented Vision is designed to make sense of all available video and image data, allowing operators to quickly create leads to solve crimes.

## OUR MANUFACTURING

## PARTNERS

## Building long lasting relationships

Our relationships with our manufacturing partners are essential to our commitment to quality. We seek out the best companies in the world, who create well designed, well-made products that are reliable and reasonably priced. We develop long-standing relationships with our partners, so our customers in turn can be confident of their long-standing relationships with iMotion. For over 25 years we have worked with the best partners of the industry producing exceptional security products and accessories.

While the Business regularly evaluates new products offerings, iMotion Security believes the products that is currently offers through our vendors are sufficient to execute and fulfill any foreseeable security or video surveillance projects.

All of these vendors are considered to be industry leaders in their respective categories.

Founded in 1996, Milestone Systems is a world-leading provider of open platform IP video management software (VMS) with headquarters in Copenhagen, Denmark. Our objective is to improve our clients' organizational processes and increase overall security through the management and distribution of digital video data. Milestone XProtect® VMS is powerful, reliable, easy to use and proven in more than 100,000 installations worldwide. Based on a true open platform, XProtect VMS enables integration with the industry's widest choice in cameras and third-party business solutions, such as access control and video analytics.

Milestone's product portfolio also includes Milestone Jetson™, a video surveillance platform designed to be embedded in hardware devices, and the ready-to-use Milestone Husky NVR series, which combines hardware with Milestone's market-leading surveillance software. XProtect VMS is compatible with more than 3,000 cameras, IP cameras and digital video recorders (DVR) from almost 150 different suppliers world-wide.

## ◆ milestone | XProtect® Husky IVO

Husky IVO is pre-loaded with XProtect, saving you time on setup and installation. Just add your XProtect license code and it's ready to go. It's also easy to manage and service, freeing up time to spend on more important aspects of your project.

Performance isn't just about the products, it's also about the people and the support behind them. The new Husky IVOs. Functionality and reliability are backed by a global team of support representatives as well as the possibility for onsite support if needed. Then there's a five-year warranty and a seamless support setup to give you peace of mind.

Your video solution is only as good as the video management software (VMS) you use – and the appliances it runs on. The new Husky IVO optimizes around small but important details so you can get the most out of your XProtect video management solution. Overall, it's the reliable choice for those wanting optimal performance.

## ◆ milestone | XProtect® Rapid REVIEW

As a security operation, you are responsible for providing answers and evidence quickly when an incident occurs. However, searching through hours of footage from multiple cameras to find a specific person or object can be time-consuming and tedious.

XProtect Rapid REVIEW powered by BriefCam is here to help. It is a forensic analysis solution that enables rapid video review, search, and analysis, seamlessly integrated into the XProtect system. With XProtect Rapid REVIEW, you can review hours of footage in minutes and easily locate people and objects of interest, turning that information into evidence and action efficiently.

Whether it's a stolen car or a getaway vehicle, with XProtect Rapid REVIEW you can quickly identify it, alert law enforcement and hand off evidence to apprehend criminals and prevent further crime.

Gallagher Security is a division of Gallagher Group, a global leader in the innovation, manufacture and marketing of security, arrival management, fuel systems, and contact manufacturing solutions. Established in 1938, Gallagher Group is a privately owned New Zealand company that employs more than 1100 staff and exports to over 160 countries.

Whether you have one or multiple buildings to protect - regardless of the number of users, Motion Security provides flexible access solutions tailored to every customer's different requirements: multi-site, multi-company, multi-visit.

Access control means checking that a person has the necessary clearance to enter an area, building or room. It helps organize human traffic inside a site and effectively manage access to different zones. In this way, sensitive areas can be restricted to identified users subject to predefined times, with all movements recorded in a log. Our technical expertise means we can analyze the badges you use today and recommend the solution best suited to your requirements.

Axis is the market leader in network video and a driving force behind the shift from analog to digital video surveillance, which paves the way for a more secure smarter and safer world. Axis offers network video solutions for professional installations featuring products and solutions that are based on innovative and open technical platforms.

Axis network video products are installed in public places and areas, such as retail chains, airports, hotels, motorways, universities, prisons, casinos and borders. Axis is a Swedish-based company, which acts globally via its own offices, representatives, and well-developed collaboration with partners. Axis retained its position as clear market leader in network cameras and in the category surveillance cameras. Axis also achieved a market leader position in the category video encoder and thereby strengthens the company's position on the surveillance camera market. Axis was the first company in the world to launch a network camera in 1996, initiating the shift from analog to digital technology.

# Honeywell

You can rely on Honeywell for the latest innovations, to help you keep up with the IP video market. Because with your one-stop shop for sales, support and service you can rest assured that an IP solution backed by Honeywell will be easier to install and maintain. We make sure the products you choose will work the first time - and work together. Trust us to be the only source you need for everything IP.

IP is the technology of the future with tremendous potential for growth and cost savings. Honeywell offers a complete IP solution - from their flagship video management platform and robust portfolio of recording solutions, to their IP camera family which includes a full range of high definition cameras. And the Open Technology Alliance forges strategic relationships with third-party vendors to give you ultimate flexibility when designing IP security systems - so you can capitalize on Honeywell's open IP architecture and use the third-party equipment you already have in place to hold down costs and transition to IP with confidence and ease.

Intelligent Management Systems for Keys & Equipment. Traka systems enable you to secure, manage and audit the use of almost any physical asset, including keys, electronic devices, secure areas, equipment, machinery and vehicles. Traka provides intelligent key and equipment management to better protect your important assets - resulting in improved efficiency, reduced downtime, less damage and lower losses, which in turn means less administration and lower operating costs.

Traka solutions work for any industry! Beyond simply controlling access to physical keys and assets, Traka solutions can bridge the gap in existing security strategies and empower any organisation to improve the processes that affect its bottom line. An integrated Traka solution can help your business increase operational efficiency, maximise utilization and strictly enforce security and safety protocols - all from the systems you currently use.

Aperio® is a new technology developed to complement existing electronic access control systems, providing end users with a simple, intelligent way to upgrade the controllability and security level of their premises.

The heart of Aperio is a short-distance, wireless communication protocol, designed to link an online electronic access system with an Aperio enabled mechanical lock. Any number of existing doors can be equipped with Aperio, and at almost lower cost than installing the regular electronic access system on every door. Aperio is easily integrated with most units and systems, regardless of the manufacturer, since it has been developed around an open standard.

Expanding your system by adding Aperio technology on additional doors increases the total security level of the premises. It is easy to install and enhances both the management and surveillance of the complete system.

Medeco® is well known for its innovation and use of technology. Medeco's high security solution starts with key control, a process that ensures keys cannot be duplicated without proper permission. With Medeco's patented key control system, it's virtually impossible for someone - even a locksmith - to duplicate a key without proper permission.

In addition, Medeco's high security locks are strong and built to resist physical attacks such as prying, picking and sawing. Medeco then takes it further with a uniquely designed turnstile pin system that reduces counter-measures such as picking and bumping.

Medeco adds another layer of security with its line of Intelligent Keys, making it easy and convenient to audit and schedule key usage. Installation is a snap. Medeco's Intelligent Keys simply retrofit existing technology without the usual hard wiring requirements.

IONODES designs, develops and manufactures high quality IP-based video and data processing appliances optimized for use with many other well-known video, data and security management solutions such as Milestone XProtect®.

IONODES' product line includes a wide array of smart appliances, ranging from a complete line of H.264 video encoders & decoders, to more advanced compact server solutions for surveillance, industrial and mobile applications.

IONODES line of Hybrid Cloud NVRs combined with the IONODES Video-Cloud offer an easy way for you to deploy an on-premise Milestone XProtect video solution combined with innovative cloud-based functions. Gain important benefits such as simple and secure live video access and archiving of event-based video clips to cloud-based secure storage.

We're the leader in Augmented Identity, and we're proud to have achieved this feat. Our ambition is to provide a trusted environment enabling citizens and consumers able to carry out their most important daily activities - paying, logging on, traveling or accessing public or private places - whether in the real world or in the digital world.

Today, information crosses the digital sphere in a matter of seconds, defying boundaries and breaking traditional security codes. Our aim is to provide comprehensive solutions that enable a simple seamless experience wherever and whenever security matters. Being a leader means staying at the forefront of innovations, capable of shaping up our security landscape. We are also aware of the need to secure people in both the physical and digital worlds, particularly in a context where the growth of connectivity will continue to foster the emergence of more and more digital services.

38

Eagle Eye Networks was created to make video security easier for all of us. Camera systems have traditionally been pretty complex, challenging for most people to manage, and costly. Eagle Eye is bringing the latest master code and cloud technologies to make cameras easier to use, more accessible, and more robust. They believe that by doing this, it will expand the applications. The goal is to eliminate a tremendous amount of headache by pulling everything in the cloud where Motion can take care of it and you don't have to.

With the Eagle Eye Security Camera VMS you can deploy analytics on one camera or multiple cameras - on any type of camera - and you can do it without installing software or buying larger servers. It's all done in the cloud on our servers. The Eagle Eye Cloud VMS is a cloud security camera system which provides 100% cloud management, 100% mobile and web browser viewing, and if you want - 100% cloud recording. This cloud video system has been architected from the ground up to be all cloud all the time.

# ICT

Traditionally, access control systems and intruder detection systems have worked independently of each other. Our products work together to provide a single cohesive and unified solution that helps you keep unwanted visitors outside, while enabling you to monitor and control access inside. All without having to break a sweat.

At ICT, they believe the key to great software is doing all the hard thinking up-front so you don't have to. There's no better example of this theory in action than the ProtegeCE package. It's an enterprise level integrated access control, intrusion detection and building automation solution with a feature set that is easy to operate, simple to integrate, and effortless to extend.

# 2N

2N is a leading European company operating worldwide, specializing in the development and manufacturing of communication solutions. It is a world leader in the field of IP intercom systems. All products comply with the strictest international standards (ISO, TUV, UL, CE) and are compatible with many third-party systems.

Whether IP door communication, for door communication and emergency calls, IP audio systems or M2M systems, 2N products reflect the latest trends in security. Their range of best-in-class products and solutions are designed to make life easier, more enjoyable and safer. In 2016, 2N became part of the JSCC Group.

# HIKVISION

39

Hikvision is a world leading IoT solution provider with video as its core competency. Hikvision now has more than 40,000 employees, over 16,000 of which are R&D engineers. Centered at its Hangzhou headquarters, the R&D teams operate globally, including R&D centers in Montreal, Canada and London, the UK as well as eight cities in China.

Hikvision advances the core technologies of audio and video encoding, video image processing, and related data storage, as well as forward-looking technologies such as artificial intelligence, cloud computing and big data. Over the past several years, Hikvision deepened its knowledge and experience in meeting customer needs in various vertical markets, including public security, transportation, retail, education, healthcare, financial institutions, intelligent buildings and others.

For over 30 years, Hanwha Vision has led the global video surveillance industry with world-class optical design, image processing and system security technologies. By expanding its business to become a global video solutions provider, Hanwha Vision will deliver more valuable and meaningful information to its customers by collecting key information and providing large-scale data analysis using AI and cloud technologies.

Hanwha Vision offers a comprehensive range of security and video surveillance solutions including IP cameras with up to 8K resolution, video management systems, video and audio analysis, as well as multi-sensor technologies.

Our intelligent surveillance solutions are used worldwide to secure people, property and data in a wide range of sectors including retail, transportation, education, banking, healthcare, hospitality, airports and many more.

AJAX security systems are the best and most modern wireless security systems available on the market. Protect your home, business or even factory with AJAX Systems' detectors. Detect burglars, fire or water damage in a split second and prevent damage to your valuable property.

Ajax can be easily extended with intrusion, fire and flood detectors, as well as relays, for remote management of electrical appliances. Additional devices can be purchased and added to the system individually.

The Ajax system plays an essential role in protecting your business against burglary, fire and flooding. As soon as a problem is detected, the system triggers a siren, warns users and requests the intervention of a monitoring center.

CDVI America is an access control system manufacturer responsible for the development, marketing and sales of access control products for North, Central and South America markets. CDVI sells exclusively through their distribution partners.

CDVI offers a complete range of access control solutions, stand-alone and PC based access control, cards & readers, keypads, wireless products, biometrics, locks and accessories.

CDVI has a wide range of products that cover many applications, including office complexes, apartment buildings, government offices, university campuses, hospitals and can also cover establishments requiring a higher level of security, such as airports, hotels, telecommunications and other critical infrastructure.

Mosino One Platform offers an integrated combination of technology for different markets including multi-family and condominium buildings, student housing, retirement homes, hospitals, as well as the commercial and industrial sectors. Mosino serves as an Operating System (OS) as an interface between the platform and customers for properties. It offers a perfect blend of digital concierge services as well as smart home technologies. Each component amplifies and enhances the experience of residents, management, staff and visitors.

Provide tenants, residents, condo owners a sense of security and allow them to benefit from modern amenities through intuitive interactions with building staff and services.

iRecord is the leading worldwide high definition digital audio and video recording, broadcast and content management solution. iRecord cloud effectively helps organizations record, store, distribute, manage and utilize critical audio and video recordings. iRecord is "purposeful" technology because it helps public safety cost-effectively increase efficiency, effectiveness, and productivity helping them better serve and protect.

iRecord Anywhere is the first surface tablet designed to create digital video recordings of interrogations. With iRecord Anywhere, you can conduct high quality mobile interviews anytime, anywhere. Interview activities in the field and capture vital video and audio content for professional analysis.

Buildings today don't only provide a safe functional place for people to live and work. They can also cater for - and more required to - their needs, while helping them work more efficiently and sustainably. The Internet of Things (IoT) and sensor-driven technologies play a vital role in this. At Bosch Building Technologies, we are at the forefront of these new developments.

With innovative solutions in everything from access to fire prevention and public announcement to intelligent video security, we are helping redefine people's relationships with the buildings they spend their time in.

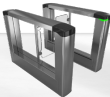

Tecnovideo helps Safety and Security Professionals who need the most robust, reliable, steel CCTV fixed cameras, PTZ accessories and fully comprehensive systems to install in the most severe, hazardous and corrosive environments. They provide cost-effective, compliant and timely delivered security solutions.

Tecnovideo has highly-qualified engineers and dedicated R&D teams with over 30 years technical and commercial background in CCTV, mechanics and electronics, as well as hardware experience on on-board/off-board installations. The people at Tecnovideo have the abilities to integrate the best camera versions and the capacities to provide one-stop customized solutions at competitive prices to meet our clients' requirements in terms of specifications, time frames and pre- and post-sales support.

AUTOMATIC SYSTEMS is a world leader in the automation of secure entrance control. The company has been designing and manufacturing pedestrian, vehicle and passenger physical access control equipment for over 50 years.

Founded in 1966, Automatic Systems has developed a unique know-how in the design of high-end pedestrian and vehicle barriers, car-pool detection and throughput management, making it a high quality brand and recognized for its products in terms of performance and reliability. Operating worldwide, Automatic Systems has a network of sales, customer service, maintenance programs, technical support, spare parts and professional training. Our partners also benefit from privileged access to comprehensive product and service documentation.

Better security. Added value. Enhanced productivity. More efficient management. SALTO can equip you with world class, keyless and future-proof access control that delivers substantial benefits.

Since 2001, SALTO has been driven by our vision of creating world class access control systems, that are simple and efficient to use. We give you the ability to control all your access needs and secure all your doors without the need for complex and expensive wiring, providing total control over who is able to access what, where and when at all times. Having revolutionized access control around the world in sectors where security is critical - from airports and headquarters to education and hotels - we continue to innovate to ensure we deliver the most advanced and flexible electronic locking solutions in the market.

Having started out designing video surveillance cameras, Verkada now offers secure product ranges that can work and interact perfectly with each other thanks to a unique software-based management method.

Each of the products they offer gives companies real-time insight into any element that could impact people's physical safety and comfort, while offering them the ability to take immediate action. These actions enable our customers to minimise safety risks, workplace dissatisfaction and inefficient costly processes.

Verkada's aim is not to design just another security system, but to set a new benchmark in security and corporate building management.

Allegion is a new name in the security industry, but they're not new for our country, they've been keeping people safe with innovative products in many categories.

From the invention of the panic bar in 1908 to the first electrically operated lock, their brands have been recognized for almost as long as people have been locking doors.

Allegion offers a portfolio of security and access control products and solutions through a range of brands, including CISA, Ingersoll, LCN, Schlage, Simonsson and Von Duprin. Allegion American segment products and solutions include locks, locksets, portable locks, key systems, door closers, exit devices, doors, door systems, electronic products and access control systems.

With over three decades of experience and multiple patents to their credit, TownSteel continues to develop innovative products for commercial and residential projects. From entrance hardware to remote locking systems, the TownSteel team strives to meet every architectural and security requirement. TownSteel brings decades of lock design expertise to the table.

The advent of automation in the building industry puts their line of electronic hardware at the center of their security solutions. TownSteel manufactures a variety of electrified locks and easy-to-use access control systems. TownSteel offers the only American National Standard Institute (ANSI) Class 1 Interconnected electronic lock.

Tens of thousands of customers rely on Brivo to secure their facilities using our cloud-based security platform, Brivo Control. With just an internet connection, both small and large businesses can manage their security operation with Brivo Control. From access control and video surveillance to credentialing, Brivo offers future-proof functionality with automatic updates at a fraction of the cost of on-premise solutions.

Enabling easy-to-manage building access control to secure your facilities, secure your assets, and protect your people - Brivo Cloud is a modern unified security platform that combines physical access control and video monitoring.

The Brivo Cloud solution is built for today's connected business people. From unlocking doors, to recording surveillance video, to giving access permissions to new employees and contractors, Brivo offers a secure physical access control solution through the cloud.

For more than 50 years, FEIG ELECTRONIC is a development partner and specialist in contactless identification (RFID), electronic control systems, traffic sensor systems and payment terminals. Based in Wolfburg, Germany and with a workforce of around 100, the company contributes to advancements in technology with innovative solutions for a wide range of applications and industries.

Quality is one of FEIG's main objectives and the core value underlying everything we do. FEIG measures its products and services against customer requirements, and consistency strives to ensure sustained standards of quality, reliability and efficiency through continuous improvement.

Proxyclick is a fully customizable, cloud-based solution that enables leading businesses to take control of their people flow. It provides a single interface to manage visitors, employees, contractors, and anyone else on premises, while improving security, efficiency, compliance and branding.

Deployed across 10,000 locations worldwide, Proxyclick is trusted by Citicorp, Vodafone, Renault, PepsiCo, Jaxx, and other global Fortune 500 companies to innovate on the guest experience across offices, commercial real estate properties, corporate campuses and production sites.

More than 60 million people have checked in with Proxyclick's fully customizable and enterprise-ready solution. Proxyclick's visitor management system is a fully integrated solution designed to reduce the operational costs associated with entering the workplace, and establish a secure environment for visitors and employees alike.

AND PROFESSIONAL ASSOCIATIONS

## Licenses, qualifications and accreditations

One of iMotion's main objectives is to offer you expertise for all your projects. Our certifications are your guarantee of quality services.

Over the years, iMotion sécurité has obtained several certifications, diplomas and endorsements as an integrator of technological solutions, in several fields of knowledge.

iMotion sécurité is committed to providing the best possible service to its customers and users. We are committed to sustainable development and continuous improvement.

Compliance with standards provides consumers with confidence that our products and services are safe, reliable and of high quality. Certification is a useful tool for demonstrating that our products or services meet our customers' expectations.

Obtaining certification is a reflection of the will of the company to position quality, professionalism and know-how at the forefront of its priorities. ||

The National Assembly of Québec passed the Private Security Act which came fully into force on 22 July. This new Act represents a major reform of the private security industry and follows a long period of reflection and exchange between the people of the private security industry and the Ministère de la sécurité publique (MSP).

The new Act replaces the Act Respecting Detection or Security Agencies which dated from 1962. It requires that any individual who carries on private security activities in Québec, must now hold an agent licence. It also requires that any person who operates a business providing one or more private security activity must hold an agency licence of the appropriate class for the activities offered. The Private Security Act applies to six distinct class of private security activities, which are security guarding, investigation, lock-out with work, electronic security systems, transport of valuables and security consulting.

The Régie du bâtiment du Québec (RBQ) has been created in 1992. Its mandate is to ensure the quality of construction work as well as the safety of people in the fields of building, electricity, plumbing, gas, petroleum equipment, installations, pressure vessels, elevators, passenger railways, amusement park rides and public parks and beaches. The RBQ fulfils its mission by adopting standards with regard to building, safety, financial guarantees and professional qualifications, by issuing licences and permits, conferring their holders with the rights of exercising, and by ensuring the application of the standards established through regulations.

Motion Security holds a licence from la Régie du Bâtiment du Québec. Find us on the RBQ licence holders directory - search for 61666-1577-01. Intercommunications, telephone and surveillance. This includes authorities construction work that is not reserved for electricians relating to intercommunications, telephone and surveillance systems, and similar or related construction work.

CANASA will be the recognized voice of security in Canada. Motion Security is a proud member of this association. Established in 1975, the Canadian Security Association (CANASA) is a national not-for-profit organization dedicated to advancing the security industry. They protect and promote the interests of its members and the safety of all Canadians through education, advocacy and leadership.

The Canasa is a recognized voice of the security industry in Canada and have a growing membership of more than 1100 member organizations in 16 Chapters and Sub-Chapters across the country representing all segments of the industry. The Canasa support their members through a comprehensive network of services, including: high quality security education, leading industry trade shows, government relations and advocacy work, marketing and communications, and the latest industry information and news.

The construction industry is a major sector in Québec, generating some \$20 billion in investments every year. The hundreds of thousands of people involved in the industry and the companies that employ them, must be constantly on the move throughout the province. This economic activity requires the contribution of many individuals and companies, including architects, engineers, suppliers of materials, workers, and contractors. Together, they form the teams that build bridges, houses, schools, factories, and businesses.

The Québec construction industry has adopted criteria for hiring workers to which construction companies must conform. The fundamental principle is competency, acquired through training and/or on-the-job experience. To demonstrate their competency and to work in the construction industry falling under the Act Respecting Labour Relations, Vocational Training and Workforce Management in the Construction Industry (Act R-22), all the Malton technicians hold a competency certificate.

The Commission de la santé et de la sécurité du travail (CST) is the organization to which the Government of Québec has entrusted the administration of the occupational health and safety plan. For this purpose, the CST sees to the application of the following two Acts:

the Act respecting occupational health and safety, the purpose of which is to eliminate at the source dangers to the health, safety and physical well-being of workers;

the Act respecting industrial accidents and occupational diseases, the purpose of which is to compensate for work-related injuries and their consequences for workers, as well as the collection, from employers, of the sums necessary to fund the plan.

Malton Security holds a certificate of compliance from the CST.

In the last 50 years, the frequency rate of accidents with injuries in the construction industry has decreased by over 500%. In addition, the number of injuries and serious injuries following falls have also declined significantly, due among other things, to the use of the safety harness. More efficient and comfortable, it is now part of everyday life of many workers.

Today the ASP Construction provides training to entrepreneurs and workers that understands that the acquisition of knowledge and skills as well as developing expertise in prevention helps them implement effective measures to eliminate the source of hazards and maintain safe and healthy working conditions on construction sites.

Every technician at Malton Security holds a certificate from the ASP Construction.

INSTALLATION | SERVICE | MAINTENANCE

# MOBILE SERVICE

## QUALITY, COMPETENCE AND RELIABILITY

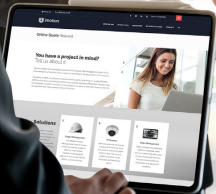

Imotion Security provides competent service technicians, who will monitor all installation, maintenance and repair tasks that your surveillance alarm, video monitoring, access control or other systems may need. Well trained to handle cutting edge security technology, they make routine inspections and will thoroughly train you about any security system installed in your home or your business.

Imotion Security has a large fleet of mobile service units. All of our trucks are equipped with a wide range of tools, parts and accessories. So our service technicians can work professionally and efficiently from the very first service call and this, according to the highest quality standards of the industry. Imotion Security is proud to offer the most meaningful customer centred customer support. With this goal in mind, our commitment is based upon the following pledge: precision, quick response, efficiency and performance. Thanks for considering Imotion Security's products and services - we guarantee we'll make every effort to satisfy your highest demands.

Together - Let's start
