IP Integration Solutions

> Meeting today's video surveillance challenges

> The video surveillance market is booming, driven by increased public and private security concerns, as well as a technology shift.

The transition to network video is a reality as customers take advantage of flexible, industry standard systems for security and video surveillance. As security management over the IP network expands, and intelligence capabilities move out to network cameras, systems can scale much more easily.

This move to open systems empowers a more productive and cost-effective means of surveillance than was ever possible

> We are...

Advanced IP solutions integrators

> Company Profile

iMotion Security provides innovative solutions in the digital video security field. Empowered by the experience of its multidisciplinary team, iMotion Security has become the top provider for customers who want to feel at ease with the new digital security technology.

Established in Montreal in 1999, iMotion Security offers a complete line of security products and services, including a wide range of cameras, alarm systems as well as door access equipment, IP solutions, video/data fibre optic cable transmission systems - and much more. With the help of our systems and our expertise, our ultimate goal is to ensure the protection of our customers while reducing their operating costs.

> Organization

iMotion Security's relentless commitment to impeccable service resulted in a substantial increase in shares of a highly competitive market. Focused on maintaining the highest level of proficiency, our advisors and technicians constantly attend different manufacturer presentations in order to offer our customers cutting edge digital security technology.

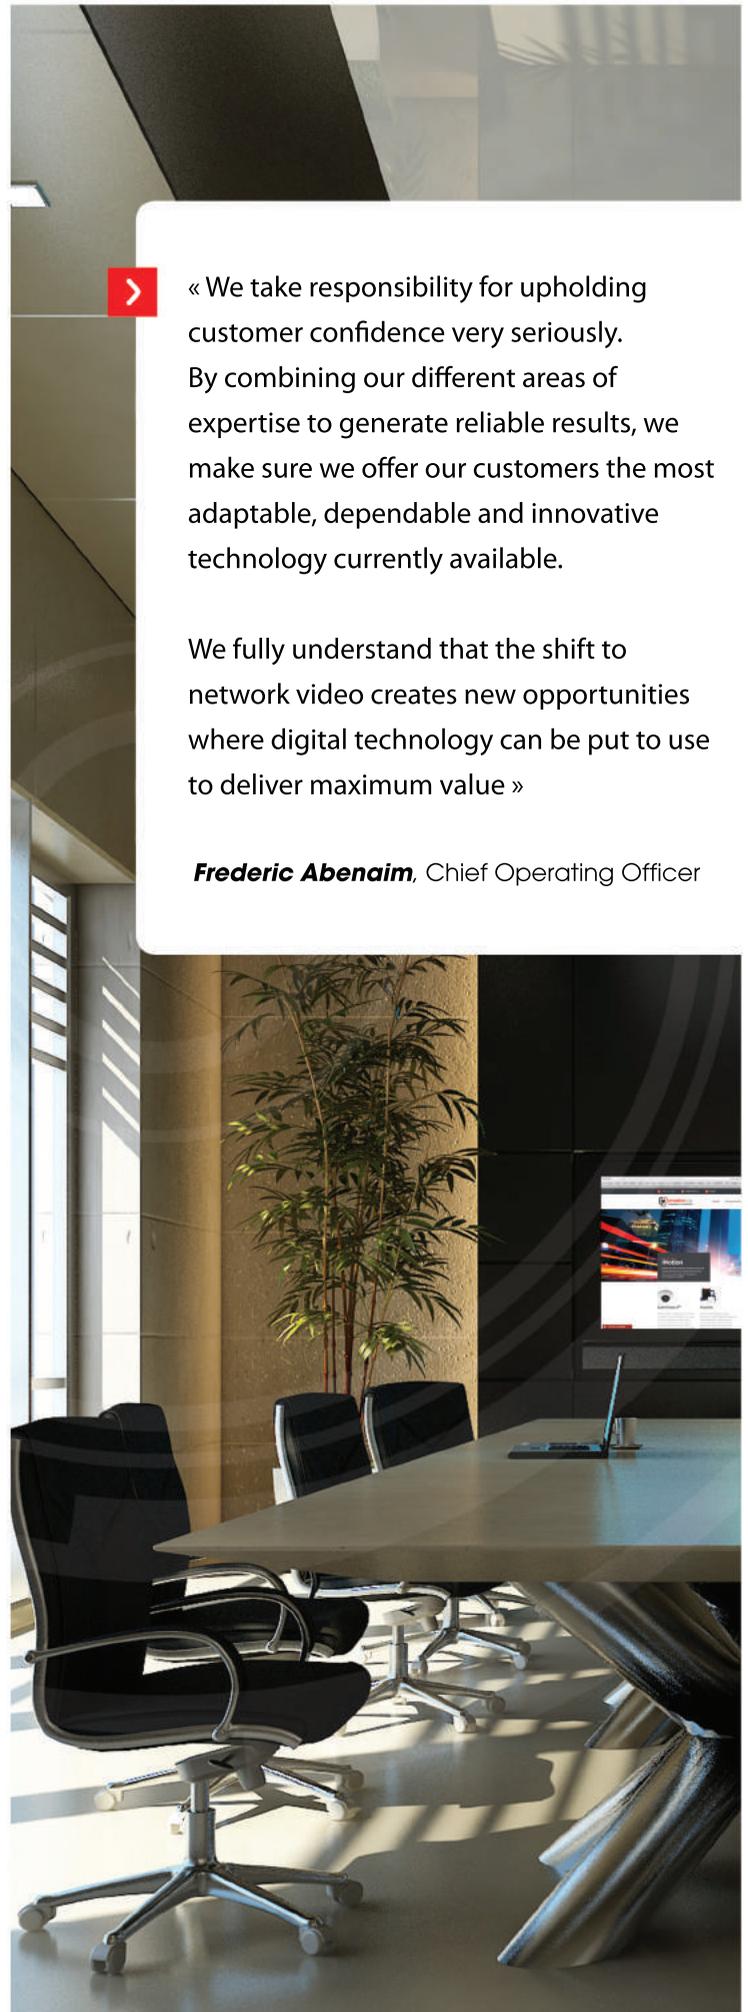

Our expertise, our savvy advice in security matters and our ability to understand our customer's needs mean that we can always offer the best possible results and the most value for your money.

« We take responsibility for upholding customer confidence very seriously. By combining our different areas of expertise to generate reliable results, we make sure we offer our customers the most adaptable, dependable and innovative technology currently available.

We fully understand that the shift to network video creates new opportunities where digital technology can be put to use to deliver maximum value »

Frederic Abenaim, Chief Operating Officer

Global Solutions

Easy and efficient implementation

> iMotion Security occupies a unique position in Canada, as integrator of professional comprehensive IP solutions.

iMotion favors standardized systems of its partner network, ensuring the durability, interoperability and scalability of all solutions implemented. Using a methodology of implementation focused on the optimization of results and costs, iMotion enables its customers to move beyond the pilot and deploy full operational security solutions.

> From analysis to... **Full Deployment**

Able to combine all technologies using Internet protocols, iMotion guides its clients in the implementation of solutions; From analysis to consulting to full deployment of the solution. Whether a IP video surveillance, an access control system, radio frequency identification (RFID) or all of these technologies combined on a single converged IP network; iMotion is the total integration systems' specialist. On each project, we set up a dedicated team to drive the development and implementation of your IP solutions:

> **Feasibility study**

Definition of the needs, its solution, and recommendation for hardware solutions tailored to the operational constraints of each client.

> **Software Integration**

development of a software solution, integrating the existing information system. Our systems integrated IP video can be used for a multitude of applications simultaneously, for example, access control, radio frequency identification (RFID), building management systems, point of sale machines, automatic withdrawals, etc.

IP Video surveillance offers a high level of integration with other equipment and functions, making the system under continuous development:

> **Migration of an analog CCTV system into an IP video solution**

With our solutions, you can integrate your analog system into a modern system based on IP technology offering unparalleled benefits. Our solutions will meet your requirements in terms of image quality, recording capabilities and reliability, enabling you to benefit from many advanced functions: remote PTZ control, Power over Ethernet, wireless, megapixel images , audio, motion detection and many others.

> **Evolutivity and flexibility**

Your solutions can be extended by adding a simple and rapid new cameras, whether they are on the same site or a new remote site. Choose exactly what you need today and upgrade your system when your needs change.

IP Video Surveillance

Cost-effective expansion

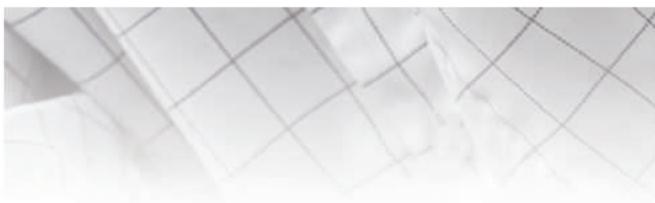

Proven in industry segments around the world.

Whether you need an IP-Surveillance solution to secure the safety of people and places, or to remotely monitor property and facilities, iMotion Security can meet your needs.

We offer the widest choice of network cameras - including many models with megapixel resolution / HDTV - and 4K - to fully meet your needs.

> Meeting today's Video surveillance challenges

The video surveillance market is booming, driven by increased public and private security concerns, as well as a technology shift. The transition to network video is a reality as customers take advantage of flexible, industry standard systems for security and video surveillance. As security management over the IP network expands and intelligence capabilities move out to network cameras, systems can scale much more easily. This move to open systems empowers a much more productive and cost-effective means of surveillance than was ever possible

For the security manager, the shift to network video creates new opportunities where digital technology can be put to use to deliver maximum value.

> Megapixel/HDTV/4K cameras

HDTV/megapixel technology enables network cameras to provide higher resolution of video images than analog CCTV, i.e. the ability to see more details or have a wider coverage – a key consideration in video surveillance applications. With an HDTV or megapixel network camera, the resolution is at least three times better than an analog CCTV camera.

> Fixed Network cameras

A fixed network camera is the best choice when a traditional camera design is preferred for deterrence. The viewing direction is set once the camera is mounted. There are several models with a varifocal lens and/or exchangeable lenses for increased flexibility.

> PTZ Network cameras

PTZ network camera offers network video functionality combined with Pan/Tilt/Zoom capability. The camera's movement is easily controlled via a computer connected to the network.

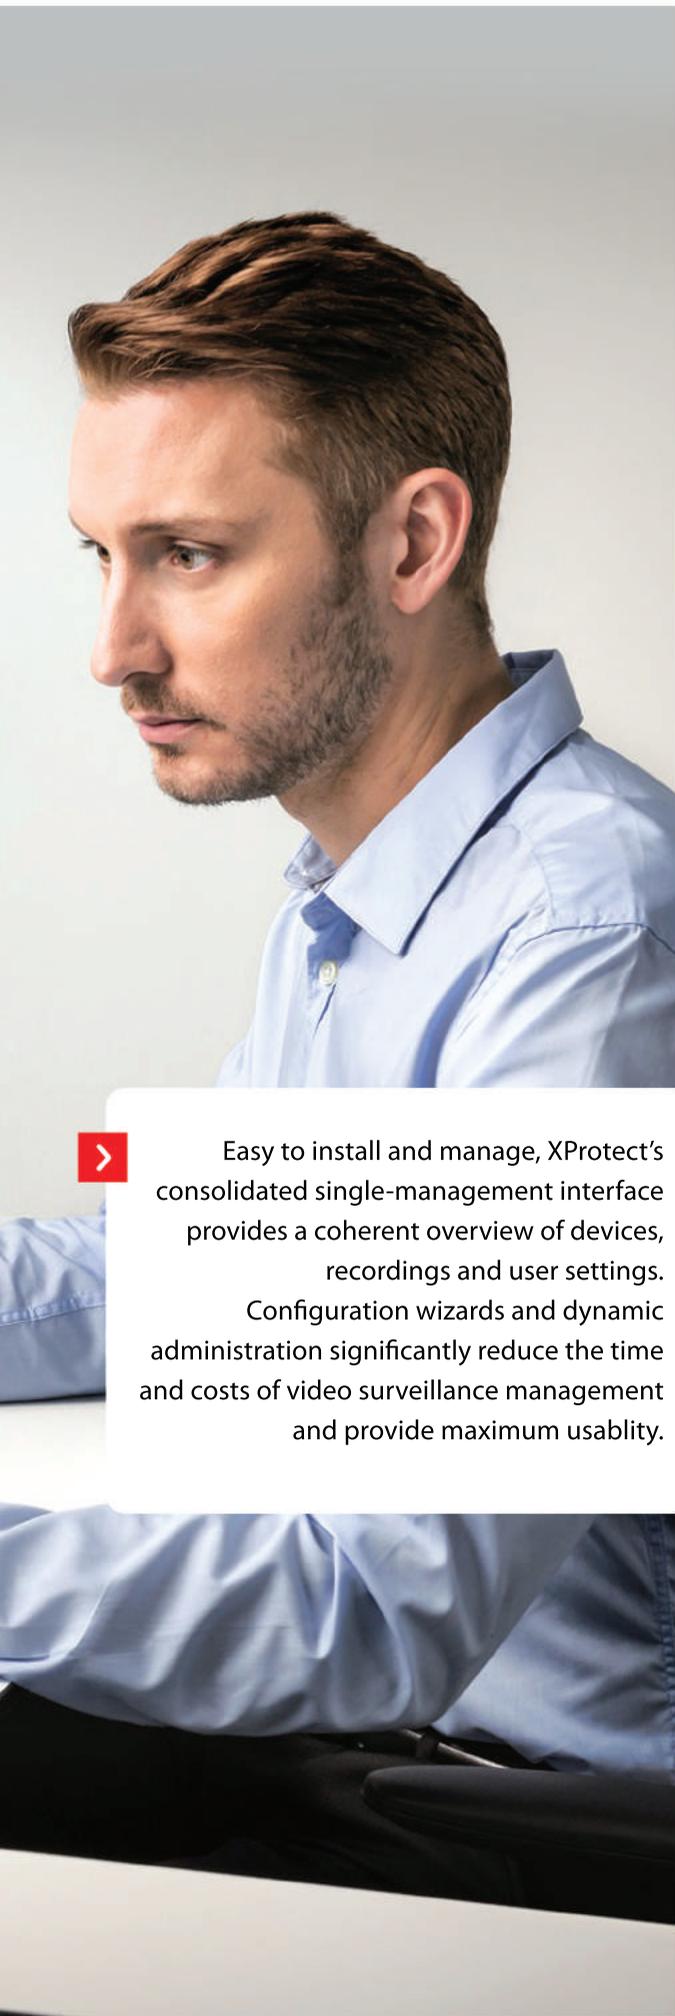

> Thermal Network cameras

Thermal network cameras create images based on the heat that always radiates from any object, vehicle or person. This gives the cameras the power to see through complete darkness and deliver images that allow operators to detect and act on suspicious activity – 24 hours a day, seven days a week.

High performance

Evolutionary Solutions

> IP Video Solutions Multisite Management

> High performance evolutive solution

iMotion security offers the industry's leading open platform IP VMS. It acts as the core of your surveillance system, connecting all the hardware of your choice for an optimal, integrated solution. The software is offered in tiers as packaged solutions scaled to different business needs.

> Usability

It offers the ability to perform most daily operations and view live or playback video from the same or multiple recording servers. The feature-rich, browser-based client also has a wide choice in viewing layouts with private and shared views, and does not require any installation.

> A scalable solution

Distributed master/slave servers provide support for an unlimited number of cameras, servers, sites and users, and allow you to grow your installation according to your needs.

> Cost-efficient long-term video storage

XProtect Enterprise is a cost optimizing option with features such as dynamic archiving that saves valuable disk space. Short-term video is stored on fast, local disks while historical data is moved to less expensive, networked disk systems maintaining instant, full and transparent access to archived video.

> Future-proof

XProtect Enterprise is full of advanced features and is built as an open platform so you can optimize and future-proof your investment. The well-documented Software Development Kit (SDK) provides easy access to the rich Application Programming Interface (API), enabling integration with best-of-breed solutions and other security systems such as video analytics, access control systems, alarms, Point of Sale (POS), Automatic Teller Machines (ATM) and gate barriers.

Easy to install and manage, XProtect's consolidated single-management interface provides a coherent overview of devices, recordings and user settings.

Configuration wizards and dynamic administration significantly reduce the time and costs of video surveillance management and provide maximum usability.

Loss prevention and stock management

Tags & Labels

iMotion offers a wide range of Nedap labels and tags to offer the best protection for all your food and non-food products. Let us know if you have special demands: we can deliver custom-made tags for you, designed and produced to your specifications.

> A unique, integral approach to **Loss Prevention**

- ▶ Nedap works around the globe to deliver industry-leading products, services and solutions for customers' diverse needs in loss prevention, stock management and store monitoring. Nedap can make your stores more sustainable, a safer place and more profitable.

With their help, we can enable our clients to improve the performance of every store they operate. We can do this because we understand the challenges retailers face, and have developed the most advanced knowledge of retail technologies to overcome them.

> we have a unique, integral approach to loss prevention. Our systems for electronic article surveillance (EAS) reliably protect your products from being stolen, but we also look at the bigger picture by including your customers and staff. To effectively protect your products, our RF and RFID EAS systems offer reliable detection, useful data and low maintenance costs.

- **RF EAS**
- **RF / RFID EAS**
- **Visitor management**
- **Access control**

!D Hand

Fashionable handheld RFID reader

- Lightweight and superior ergonomics
- Optimal reading performance
- Single button user interface
- Vibration motor and beeper
- Compatible with iPhone, iPad and other devices
- Open API available for easy integration

RF/RFID Electronic Article Surveillance

Other than barcodes with generic information, RFID tags contain a unique serial number, which makes it possible to identify whether an individual product has been sold or not. Whenever an unsold item leaves the store, the RFID antenna at the store exit will give an alarm. We call these systems EAS !D, which consist of floor- or ceiling-mounted EAS antennas at the store exit and matching RFID tags or labels attached to the products that are simply deactivated or removed at the cash register. EAS !D gives you more features and adds new products to the portfolio, including a hybrid RF/RFID pedestal and a ceiling-mounted RFID antenna. Future-proof RF to RFID upgrade path If you are planning to use RFID for inventory management in the future, investing in standard 8.2Mhz RF technology does not make much sense. In this case, it is smarter to invest in Nedap RF EAS systems, which are easily upgradable to RFID when you are ready

Stock Management

Retail is a fast moving environment. In the store, secure and reliable stock management is vital to make the merchandise available to customers the moment they want to purchase. On the shelf and online, we have the systems to help retailers manage inventory so you never have to say 'no' to your customers. Using RFID, retailers remove the guesswork from the shop floor. Managers can rely on instant and detailed data to guide decision making and manage the store teams.

The more you know the more you sell Nedap developed a full portfolio of RFID readers and services, called Store !D, specially designed for in-store RFID applications. We know the challenges and demands of retailers in terms of flexibility, scalability, robustness and a return on investment in a short period.

ASSY

BiblioChe

> 1.7 Billion reasons why **Nedap matters**

- Manually checking-out, checking-in and shelving books is time-consuming and costly. Library staff lose valuable time which could be better spent helping their customers. Libraries in many countries currently face both time-management issues and financial pressure, and that at a time where 20% of the world's population is illiterate: about 1.7 billion people can neither read nor write.

With our Librix portfolio we want to support libraries to maintain their relevance in the current age of information. This might be a small library that only needs their items to be secured or a large library that needs support with reshelving books, sorting library items or more efficient logistics. Even small libraries that gradually want to grow are also fully supported by the Librix portfolio.

At Nedap we believe that libraries need to maintain their relevance in society. Nevertheless, libraries are currently experiencing upheaval, due to a generation of young internet users, social changes and budget cuts. With our Librix portfolio we help libraries in this quest by eliminating repetitive tasks, reducing costs and improving service levels.

Embedded video **Analytics**

IN TODAY'S COMPETITIVE RETAIL ENVIRONMENT, it is not enough to offer high quality service or goods, or to create well-organized promotional campaigns. To really be successful and gain that competitive advantage it is crucial to learn and comprehend the driving force behind changing market realities: the behavior of customers.

> True-view **Heatmap**®

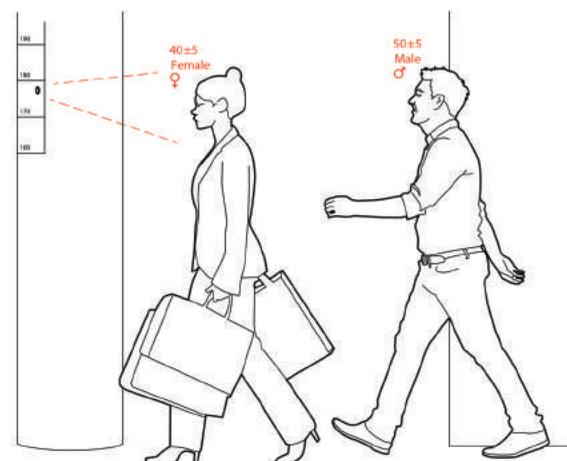

TrueView Heatmap® provides an easy-to-use tool that allows for a scientific approach to evaluating store design changes. The product helps you to pinpoint problem areas, find the best merchandising spots for product campaigns, set shelf rent based on the customer activity at that spot, etc. TrueView Heatmap® is a powerful and flexible tool for measuring activity and traffic patterns in stores and other indoor environments.

Data can be viewed in visual heatmap format or as graphs for predefined areas. It runs fully embedded in standard ceiling mounted or wall mounted network cameras. A camera running TrueView Heatmap® can at the same time also be used as a standard camera for surveillance, potentially reducing the total project hardware cost.

> True-view **Demographics**®

BASED ON COGNIMATICS' LEADING TECHNOLOGY for video analytics, TrueView Demographics® offers cost efficient, scalable, and easy-to-install video analytics for automatic gender and age detection. It is a powerful stand-alone retail analytics application embedded directly in standard network cameras, allowing users to leverage on existing IP networks. All video analytics is done locally on the camera dramatically reducing Ethernet bandwidth requirements. The complete solution is easily installed in an existing local area network and configuration can be done at any physical location using a standard web based interface.

Use your precise knowledge about customer traffic statistics to increase the performance of your business:

- Compare gender and age statistics between stores throughout an entire chain.
- Cross data with visitor traffic and POS data to gain insights about customer behavior.
- Follow up and optimize marketing campaigns, including digital signage.
- Plan for staff levels and staff demographics.
- Reduce cost base, increase sales and improve the customer experience.

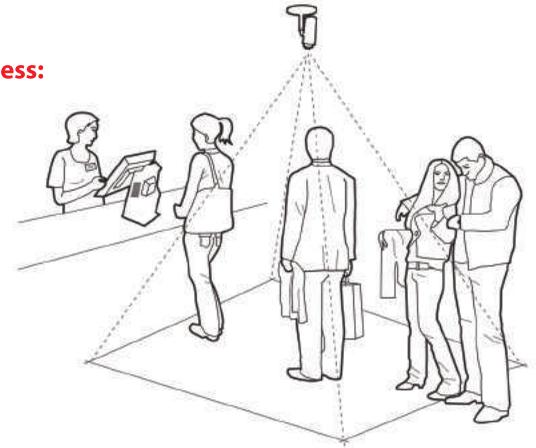

> True-view Queue®

QUEUEING is one of the most critical and emotional parts of a retail operation. Most people dislike queues. Not surprisingly, research shows that queueing at the checkout is the main cause of customer dissatisfaction in retail. Short wait times together with optimum deployment of personnel at the checkout are therefore key to enhance the customer experience and encourage spending. BASED ON COGNIMATICS' PATENT PENDING TECHNOLOGY for video analytics, TrueView Queue® offers a cost efficient, scalable, and easy-to-install tool for queue measurement. It is a powerful stand-alone application embedded directly in standard IP cameras, allowing users to leverage existing IP networks. All video analytics are done locally on the camera dramatically reducing Ethernet bandwidth requirements.

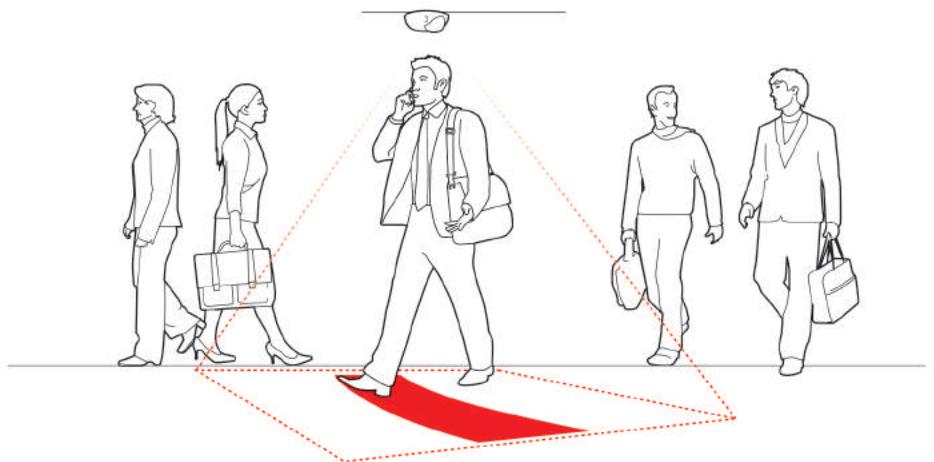

Use effective queue measurement to improve the performance of your business:

- Minimize time spent in queue.
- Build enduring customer loyalty.
- Encourage spending.
- Increase customer satisfaction.
- Analyze trends and evaluate advertising and promotions.
- Improve staff planning and determine optimal opening hours.

> True-view People Counter®

IN TODAY'S COMPETITIVE RETAIL ENVIRONMENT, success is dependent on a thorough understanding of existing and potential customers. Constantly changing customer preferences, eroding customer loyalty and the inherent complexity of large retail organizations demand increased analysis of the customer behavior. BASED ON COGNIMATICS' PATENT PENDING TECHNOLOGY for video analytics, TrueView People Counter® offers cost efficient, scalable, and easy-to-install people counting. It is a powerful stand-alone people counting application embedded directly in IP cameras, letting users leverage existing IP networks. All counting is done locally on the camera dramatically reducing Ethernet bandwidth requirements. The complete solution is easily installed in an existing local area network and configuration can be done at any physical location using a standard web based interface.

Use your precise knowledge about customer traffic statistics to increase the performance of your business:

- Increase sales by leveraging your buyer-to-traffic ratio and your turnover per visitor.
- Collect data on customer flows, trend analyses, evaluation of advertising and promotions.
- Enhance strategic marketing decisions through effective monitoring of customer traffic.
- Improve your staff planning and determine optimal opening hours.
- Base bonus system on visitor traffic, buyer-to-traffic ratio or turnover per visitor.

> Heightened Security

To secure all of your building facilities and assets, as well as to protect access to the heart of your business, iMotion Security provides a very wide range of products and services. These bring together all management units, both workstation terminals and peripherals, better defining your control over access.

> Access Control

Intelligent management

These days, access management systems must do more than just lock doors. Your business needs a system that gives you the necessary control and information to help you work more efficiently.

To prevent unauthorized access throughout your facilities, iMotion Security offers you electronic access management systems using smart and beneficial tools, no matter what kind of business you operate.

We offer a variety of access control products. Working with you, we will design a global security concept that caters to your needs to protect sensitive areas of your business. The modular nature of this system allows us to offer you a turnkey solution or to opt for a joint approach with one of our partners.

> **Customer Service**

Unsurpassed support

> **We want to serve you better**

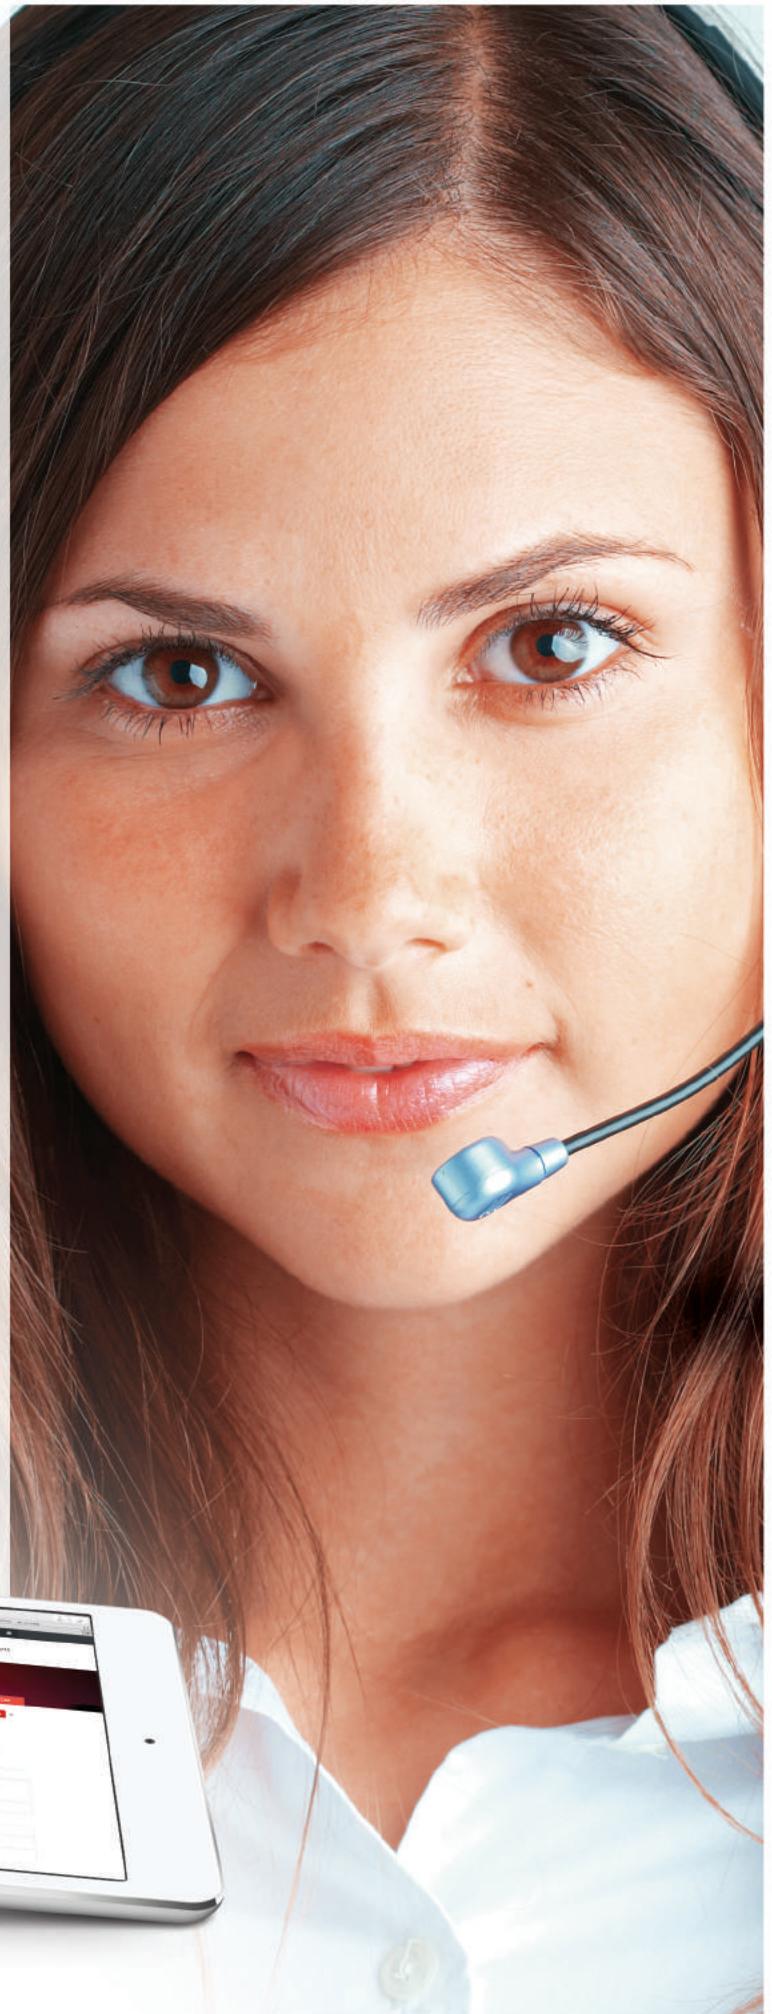

Our customers rely on an outstanding level of service and support to meet their needs. This is why iMotion Security surrounds itself with the finest people, conscious of the importance of this service and support. To better serve our customers, these same people profit from an ongoing training process that makes them exceptionally proficient.

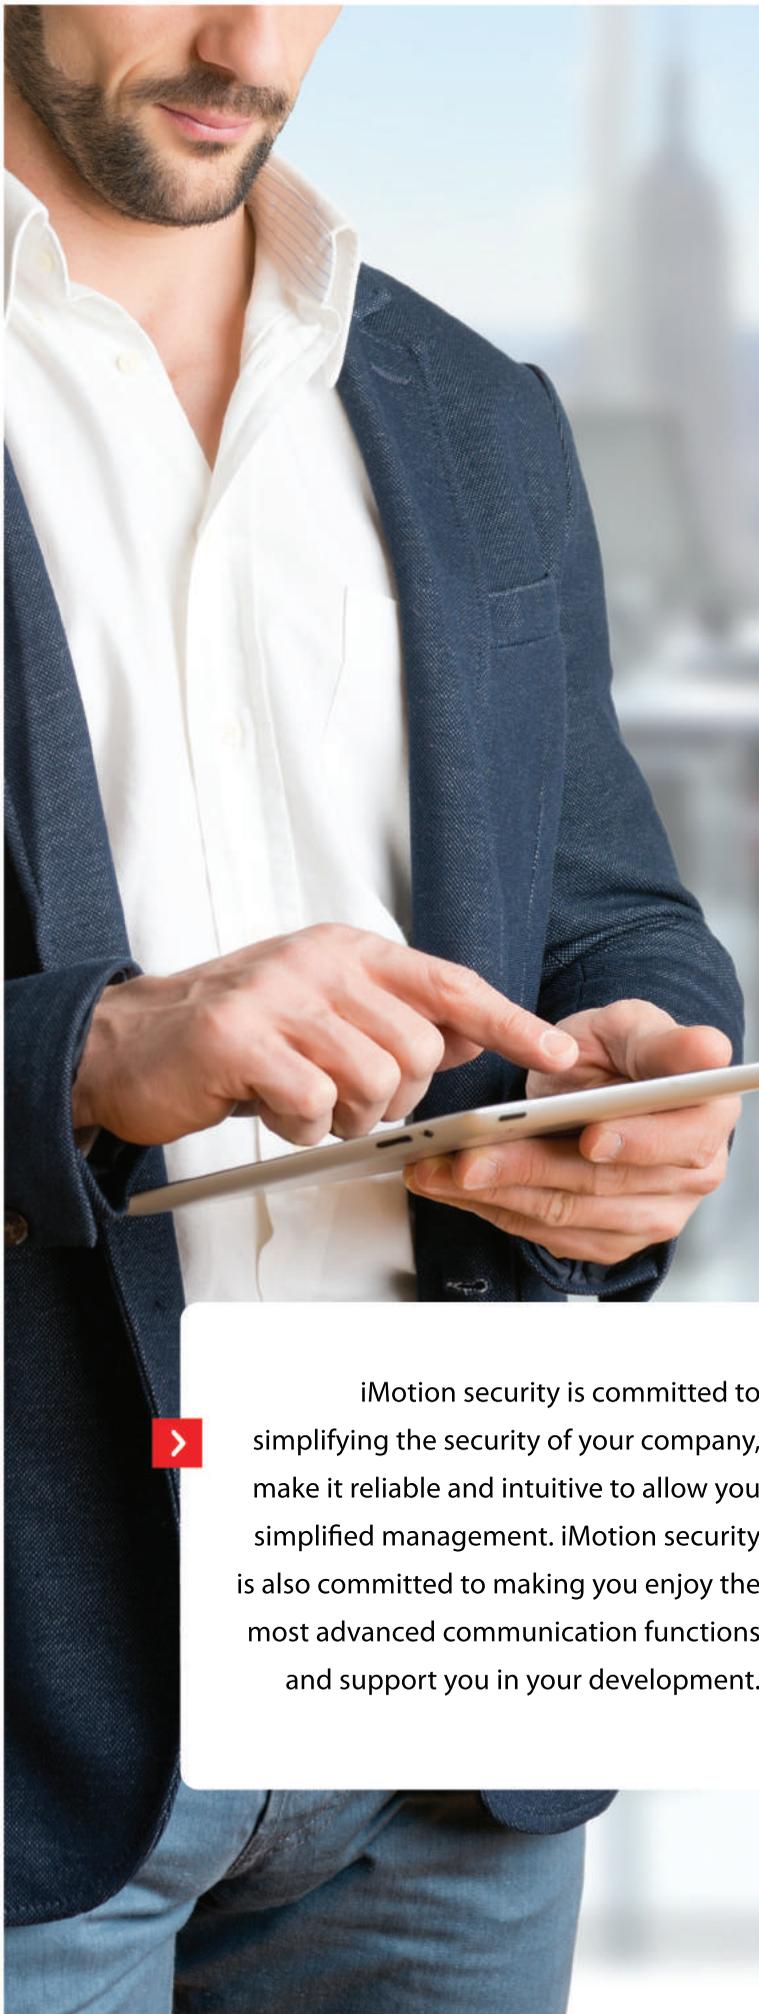

It is our mission to serve you responsibly and professionally. Our staff is equipped to do just this, and we actively solicit your opinions on our performance as well as noting your suggestions so that we can continue to improve the quality of our service. Our technical support team is easily reached by phone or email. You can also contact us 24 hours a day, 7 days a week.

You will find on our website in the "customer service" section, safety tips, answers to your questions and a wide range of useful forms and documents.

Visit our website to find useful documentation, or to place a service call.

www.imotion.ca

> Security made simple

For ongoing success, you need to keep communication lines open between your employees, your customers and your partners. These days, business is done in a variety of ways: by phone, email, instant messaging, videoconferencing. No matter how you communicate, you need proven technology that fits into your work process to help your business grow and prosper.

Businesses today, big or small, now turn towards converged networks to bring together all means of communication (data, voice and video) into one single IP (Internet Protocol) network. Converged networks make it easier for employees to collaborate and stay productive wherever they are. The information that they need is always available, wherever and whenever, improving your customer service. With a converged network, you can better ensure customer loyalty, raise your profits and better control your costs.

iMotion security is committed to simplifying the security of your company, make it reliable and intuitive to allow you simplified management. iMotion security is also committed to making you enjoy the most advanced communication functions and support you in your development.

> **Mobile Service Unit**

A team of passionate people

▶ **Professional support**

For your convenience iMotion Security provides competent service technicians who will execute all installation, maintenance and repair tasks that your alarm, video monitoring, access control, or other system, may need. Well-trained to handle cutting edge security technology, they make routine inspections and will thoroughly teach you about any alarm system installed in your home or your business.

iMotion Security has a large fleet of mobile service units. All of our trucks are equipped with a wide range of tools, parts and accessories. So, our service technicians can work professionally and efficiently from the very first service call, and this, according to the highest quality standards of the industry.

▶ **Our Commitment**

iMotion Security is proud to offer the most exacting customers unrivalled customer support. With this goal in mind, our commitment is based upon the following pledge: prevention, quick response, efficiency and performance. Thank you for considering iMotion Security's products and services - we guarantee we'll make every effort to satisfy your highest demands.
