

EAS+

Loss prevention in retail stores

As a retailer, your customers and your products are at the centre of your attention. You want as many visitors leaving your store as satisfied customers as possible. But you also want to be sure that all merchandise leaving your store has been properly paid for. Our Electronic Article Surveillance (EAS) solutions offer you just that; security and peace of mind. Our loss prevention systems optimally protect your merchandise and your profits.

Why EAS+ ?

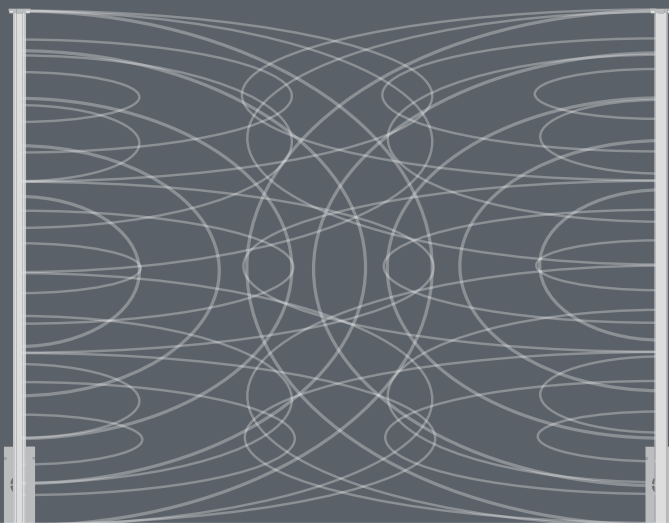

Nedap EAS systems always have a plus, that's why we call these systems EAS+. They can be fitted out with a range of fully integrated extra options. No extra posts, barriers or devices. We keep your entrance or check-out area attractive, accessible, and clutter-free.

With our EAS+ systems, you know what comes into your store, and what leaves your store; anytime, and anywhere. EAS+ systems consist of detection antennas at the store exit or check-out, and matching tags attached to the products in your store. At the cash register, the tags of sold goods are simply deactivated or removed.

EAS+ stands for

- Well-designed, fashionable RF EAS antennas that perfectly fit in any retail store.
- Integrated features such as customer counting and metal detection, so your store entrance stays uncluttered.
- 100% tested labels and hard tags that improve theft protection and staff confidence.
- High-performance smart deactivators and detachers that expedite the POS process.
- Online systems that are monitored 24/7 to give you feedback on theft risks and store performance.
- Remote service for a quick response without the need for technicians in your store during opening hours.

OID technology

The patented Nedap OID (Orientation Independent Detection) technology provides best in class detection regardless of the orientation of the hard tag / RF label.

Effectiveness & scalability

Nedap's EAS⁺ systems offer outstanding performance, detection range and stability in any retail environment. High quality antennas in combination with the latest generation of electronics ensure a stable, best in class detection performance – also with smaller hard tags or paper labels. The patented Nedap Orientation Independent Detection (OID) technology provides best in class detection regardless of the orientation of the hard tag or RF paper label.

We offer different solutions depending upon your store's specific needs. We understand how important it is that loss prevention systems are customer-friendly, scalable, sustainable, simple to use and 100% reliable.

1 Design

Select the antenna design that matches your brand.

2 Features

Add extra features.

3 Performance

Pick the electronics that match your needs and store design.

1 Antennas designed for retail

The shopping experience starts at the entrance to your store. That is why we offer a wide range of welcoming EAS antennas, either transparent or open in design and with or without advertising options. Our antennas can be completely customized to your brand and store design.

Open antennas

This modern, open design reinforces your stores' look and feel. The antenna is available in various sizes. Flexible colors and appearance ensure seamless integration into any store environment.

Advertising antennas

Customers get their first impression of your store's appearance and brand right at the entrance of your store. By equipping your antennas with advertising posters, you can communicate your message or special offers to passers-by, inviting them to come in and start shopping.

Transparent antennas

With this elegant Plexiglas model, your store entrance keeps its open look and feel without losing a key deterrent against shoplifting; an unobtrusive but still visible EAS antenna system. Available in different sizes to cover any entrance.

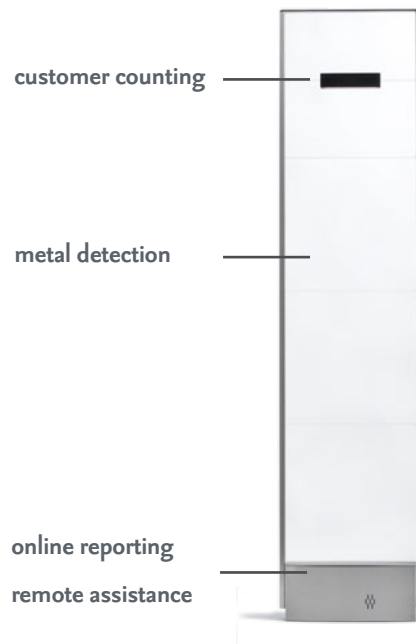

2 Integrated extra features

Our EAS⁺ systems can be equipped with additional, integrated features that make life easier for retailers.

Customer counting

Never lose count of your customers again. With our customer counting capabilities, you know when and where your potential customers come into your stores. You'll know how long they stay in your store, how they react to campaigns, and you can calculate your conversion rate. Peak times, slow times, you'll always know how many staff you need to serve your customers.

Metal detection

The patented capability of integrated foil-lined bag metal detection is truly unique. While you do your best to make sure any goods leaving the store have actually been paid for, sometimes specialized foil-lined bags are used to prevent detection of EAS labels. We have integrated metal detection into our antennas to detect anyone entering your store with these types of prepared bags or coats. Detection, if so required, can be signaled discretely with our special pagers.

Theft Risk Monitor

The Theft Risk Monitor application gives you complete 24h insight into your security investment by means of user-friendly management reports. At any given time, and from anyplace, you can remotely monitor the number of alarms, deactivation volumes or the number of visitors and use this information to minimize the theft risk and optimize the store performance.

Remote service & maintenance

Connected systems can be monitored and serviced remotely ensuring the highest system uptime. The time and hassle of on-site repairs is reduced drastically as up to 80% of all service calls are now resolved remotely. Since you are much less likely to have to call in a service technician, precious time and money is saved as most calls are resolved within hours without any on-site service costs.

3 Mix & match EAS+ electronics

You can combine our EAS+ antennas with a range of electronics that offer different functionalities and advantages. With our flexible mix & match portfolio, we can easily adapt our products to your store design and your loss prevention needs.

Economy line

No store is ever too small for good security. Nedap has solutions for any store you can imagine. From small street corner stores to the largest hypermarket. From discounters to high-end stores. Our Economy line solution may be just what you are looking for; good value for money. Simple, secure, minimal fuss.

Business line

Our Business line gives you more functionality. Intelligent software, 24/7 monitoring; it's all possible. Extend your basic security systems in a modular way with additional functionality and services to fit your exact needs; add connectivity for remote assistance, management information or customer counting.

Dynamic line

The Dynamic line is a complete package of hard- and software with 24/7 monitoring, management reporting and remote servicing capabilities, fully tuned to the requirements of modern stores and chains. With this line, you can add metal detection as a security option.

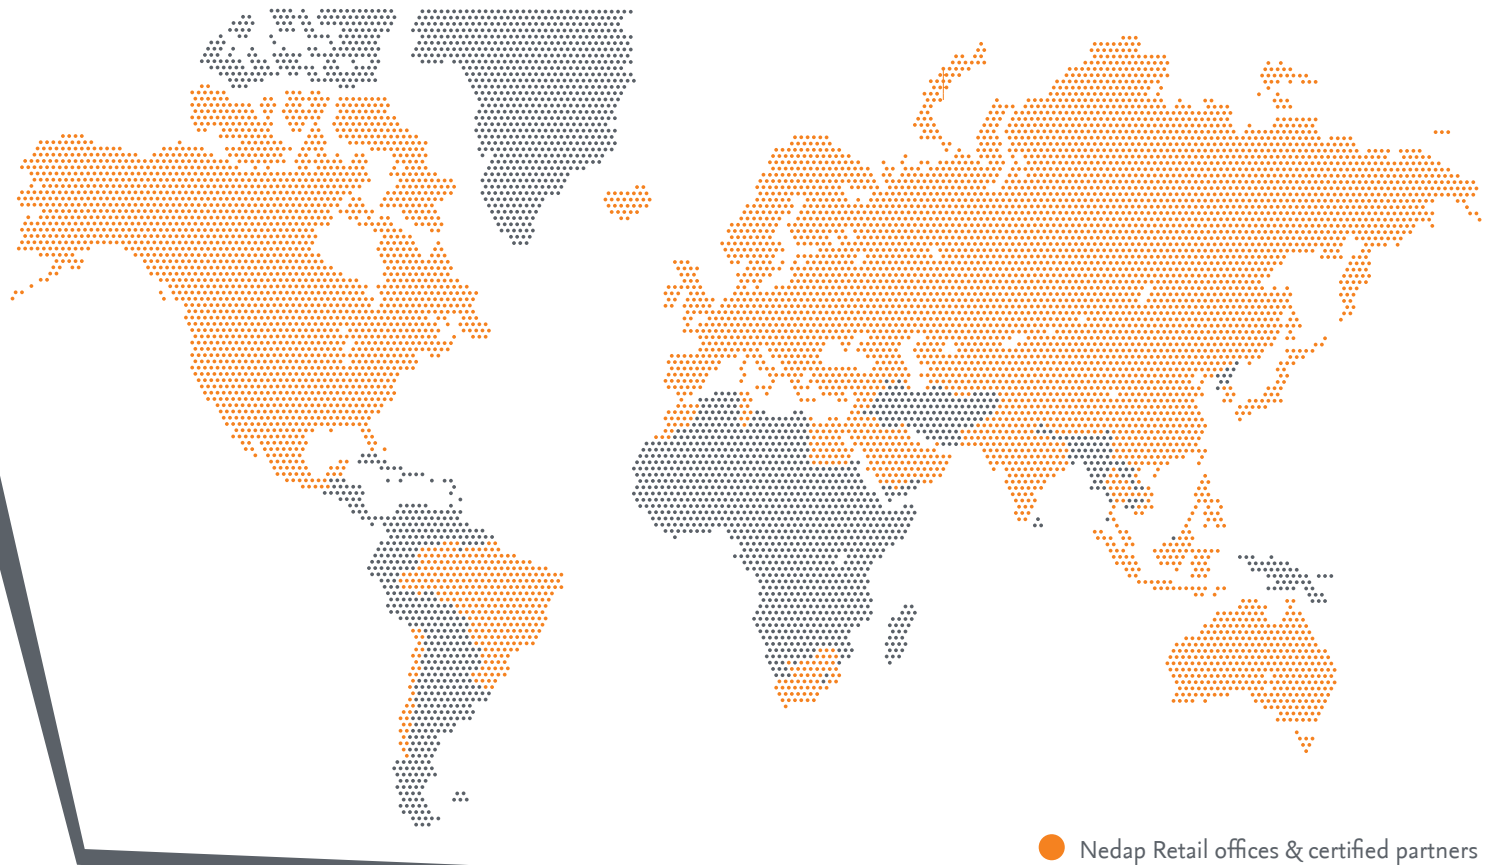

Check-out line

Nedap's Check-out line has been specifically designed for security at the cash register, which is often the requirement in super- and hypermarkets, DIY stores or home gardening stores. The EAS⁺ Check-out line is a robust system that provides management information 24/7. It can be monitored and serviced remotely at any location in the world.

Worldwide support

Nedap Retail has an extensive network of business partners that are present in every retail market where you are present. We combine the power of being local with global support. Because all Nedap partners are certified and engineering staff continuously trained, our high quality standards are assured across the globe.

Nedap Retail has offices in the Netherlands, France, Germany, the UK, Spain, China, Hong Kong, USA and the Middle East and certified partners in more than 90 countries.
